About the screenshots

The pictures in this guide come from a test copy of the portal filled with sample data. Pair names, tickers, prices and results in them are made up. Your screens will show real data once the market feeds are connected (section 2).

1. What Trading desk does

Trading desk is a private portal for the owners. It watches the markets with your own trading rules, tells you when a setup appears, explains why, and keeps score of how each suggestion worked out.

What it does

- **Scans forex every 15 minutes** with two systems: the **3/8 system** and **Fib Pivot**. It looks only at completed 15-minute bars, never a bar that is still forming.
- **Screens US stocks once a day** after the close, at 18:30 New York time, and lists the stocks whose trend qualifies.
- **Explains every signal:** the trade plan (entry, stop, target), which indicators fired, which checks passed, and a chart.
- **Tracks every signal to its outcome:** target hit, stop hit or expired, and keeps the record on the History page.
- **Alerts you** by phone notification, Telegram or email, following your own preferences.
- **Adjusts prices for your broker**, so the entry and stop you see match what your broker shows.

What it does not do

- **It never places trades.** There is no connection to any trading account. Every decision is yours.
- **It does not guarantee results.** Past or simulated results do not predict future results.
- **It is not for sharing.** Access is limited to the approved owners. Do not forward alerts, screenshots or results to anyone else; doing so can raise regulatory and data-licence issues.

You will see this same promise on the notice screen the first time you sign in. You need to select **I understand** once before continuing.

2. What is connected today

The portal is running on the staging address while the outside services are connected one by one. This table shows what works now, what you will see until each part is connected, and what changes afterwards.

Part	Status	What you see now	Once connected
Portal and sign-in	Live	All pages open. Sign-in works for approved emails.	Moves to the business's own web address for production.
Sign-in emails	Partly	Links reach the first admin only, and may land in spam. Other owners cannot receive a link yet.	Once the business email domain is verified, every owner gets links in their inbox.
Forex prices (OANDA)	In progress	Health shows <i>No bars yet</i> for each pair. No forex signals, no levels.	History loads within minutes, then a new bar every 15 minutes. Signals and levels appear.
Stock prices (Massive)	Not yet	The Stocks page is empty. Holdings can be entered, but progress stays blank.	After a one-time history load (about an hour), the screen updates every weekday evening.
Phone notifications (push)	Not yet	Turn on notifications replies: <i>Push notifications aren't set up on the server yet. Email and Telegram still work.</i>	The button asks your phone for permission and alerts arrive on the lock screen.
Telegram	Not yet	Settings, Notifications says <i>Telegram isn't set up on the server yet.</i>	A Connect Telegram button appears. See section 13.
Email alerts	Partly	Same limit as sign-in emails.	Email is always on as the fallback channel.
Scanner health alerts	Partly	The Health page works. Alert emails depend on the email set-up above.	Admins are emailed if the scanner stops, and again when it recovers.

Before production

The portal first runs for ten trading days on staging to prove it never misses a bar and that alerts arrive within 90 seconds. Then it moves to production for a 4 to 8 week paper run: you watch the signals without trading them while the rules are reviewed each week.

What you can do today

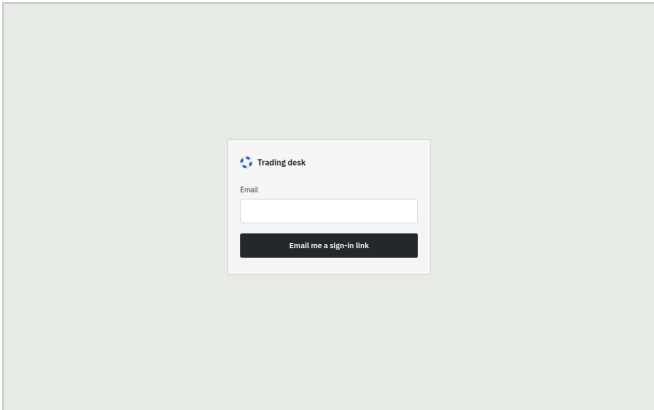

- Sign in, accept the notice, and look around every page.
- Set your profile, time zone, theme and broker (section 14).
- Install the portal on your phone (section 4) and choose your notification preferences (section 13). They take effect as each channel is connected.
- Enter your stock holdings (section 11).

3. Signing in

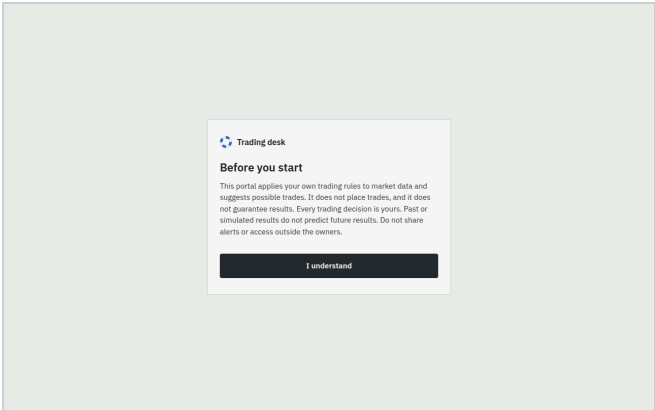

There are no passwords. You sign in with a one-time link sent to your email.

- 1 Open the portal address in your browser.
- 2 Type your email and select **Email me a sign-in link**.
- 3 Open the email titled *Your sign-in link for Trading desk* and select the link. It works once and expires after 15 minutes. If it is not in your inbox, check spam and mark it *Not spam*.
- 4 The first time, read the notice and select **I understand**. You land on the dashboard.

You stay signed in for 30 days on that device. To sign out, open **Settings** and select **Sign out**.

The sign-in page.

The one-time notice.

The page says	What it means
<i>This email isn't approved. Ask an admin to add it.</i>	Only approved emails can sign in. An admin adds you in Settings, Users.
<i>Email isn't set up on the server yet...</i>	Sign-in emails are not connected. See section 2.
<i>Too many sign-in links requested...</i>	Wait 15 minutes, then try again.
The link opens an error or the sign-in page again	The link was already used or is older than 15 minutes. Request a new one.

Never forward a sign-in link. Anyone holding it can sign in as you until it is used or expires.

4. Install it on your phone

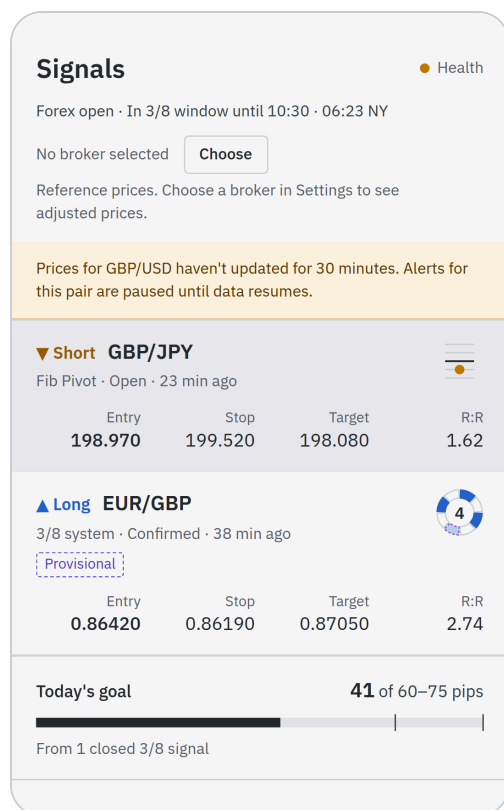

The portal works in any browser, but installing it on your Home Screen makes it open like an app. On iPhone, this step is required before phone notifications can be turned on.

iPhone and iPad

- 1 Open the portal in **Safari** (not Chrome) and sign in.
- 2 Tap the **Share** button.
- 3 Choose **Add to Home Screen**, then **Add**.
- 4 Open **Trading desk** from your Home Screen. Sign in again if asked; this copy has its own sign-in.

Android

- 1 Open the portal in **Chrome** and sign in.
- 2 Open the **⋮** menu.
- 3 Choose **Install app** or **Add to Home screen**.
- 4 Open **Trading desk** from your Home Screen.

The dashboard on a phone, with the tab bar at the bottom.

5. Finding your way around

On a computer, the menu is on the left. On a phone, the main pages are in the tab bar at the bottom; the rest are under Settings.

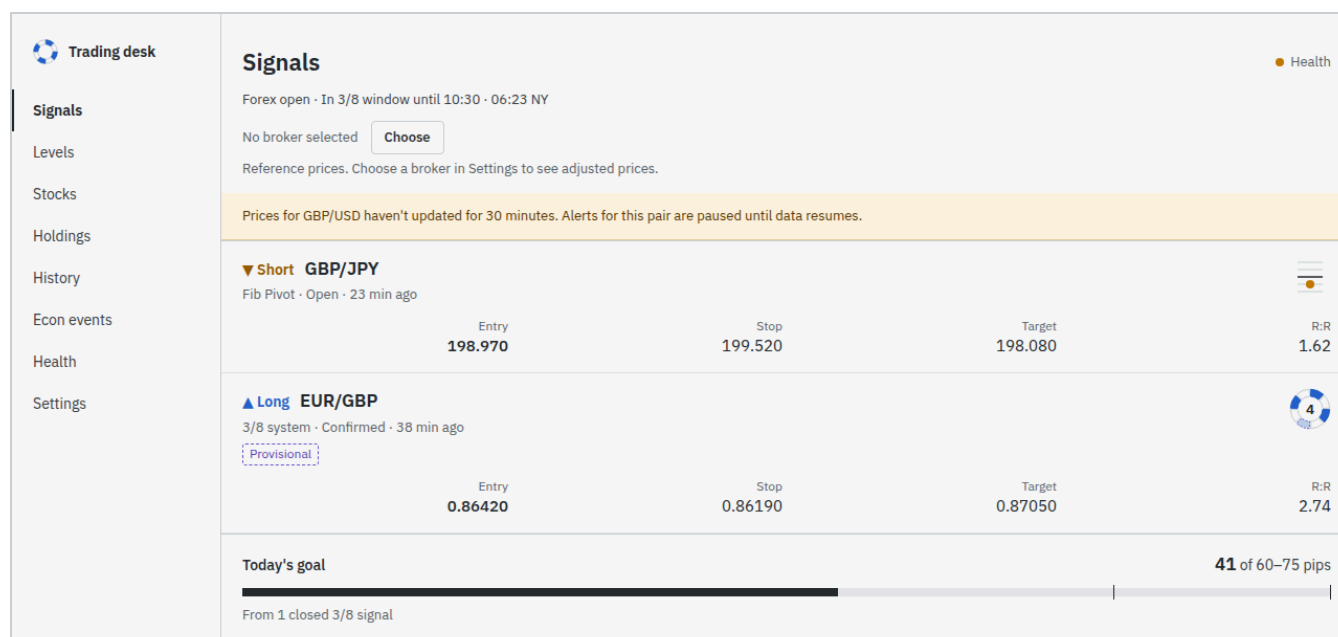

Page	What it is for
Signals	The dashboard: live forex signals, market status, today's goal and newly confirmed stocks.
Levels	Today's pivot levels, previous day high and low, and the Fib Pivot ladder for each pair.
Stocks	The daily US stock screen and each stock's detail.
Holdings	Your own stock positions and their progress to target. Private to you.
History	Every closed signal, results and the CSV export.
Econ events	High-impact economic reports. The 3/8 system applies stricter rules for an hour after each one.
Health	Whether the scanner is running and each pair's data is fresh.
Settings	Profile, time zone, theme, broker, notifications, sign out, and admin pages.

How colours and labels work

- ▲ **Long** is blue with an up arrow; ▼ **Short** is amber with a down arrow. The word is always shown, so colour is never the only clue.
- **Provisional** marks a rule that is still waiting for the owners' approval. Treat signals that rely on it with extra care.
- All times are shown in **New York time** unless a page says otherwise. The forex trading day starts at 17:00 New York time.
- The coloured dot next to **Health** at the top of the dashboard is green when all is well, amber when something needs a look, and red when the scanner has stopped.

6. The dashboard

Open **Signals**. This is the page to check during the trading window. It refreshes by itself every 30 seconds.

The dashboard with two live signals (sample data).

Status line

For example *Forex open · In 3/8 window until 10:30 · 06:23 NY*: whether the market is open, whether the 3/8 trading window is active, and the time in New York.

Broker

Shows your chosen broker. Select **Choose** to pick one; prices then match your broker (section 14). Without one, you see reference prices.

Warnings

An amber bar appears if a pair's prices stop updating. Alerts for that pair pause until data returns.

Signal cards

Newest first. Each shows direction, pair, system, state, age, entry, stop, target and reward to risk (R:R). The ring on 3/8 cards shows how many of the 8 indicators fired. Select a card to open it.

Today's goal

Pips gained today from closed 3/8 signals, against the 60 to 75 pip goal.

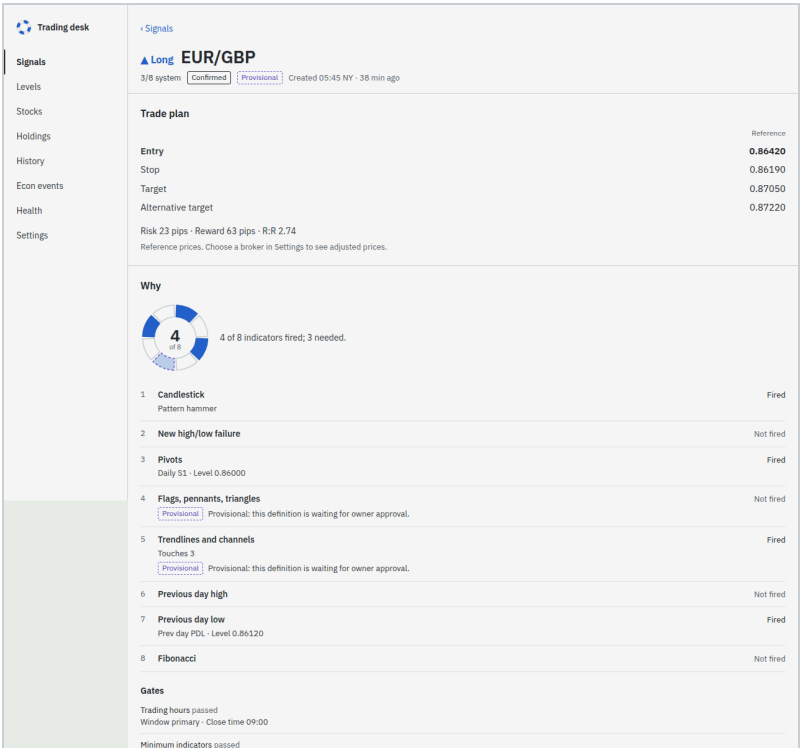

Stocks

How many stocks were newly confirmed after the last session, with a link to the screen.

When no signal is live, the page says so. Outside forex hours (Friday 17:00 to Sunday 17:00 New York time) it shows when the market reopens.

7. Reading a signal

Select any signal to see the full plan and the reasons it fired.

A 3/8 signal (sample data).

Trade plan

Entry, stop, target and an alternative target, with risk and reward in pips and the reward to risk ratio. If you chose a broker, a second column shows the prices adjusted for its spread.

Why

The ring and the list of indicators: each one shows **Fired** or **Not fired**, with the level or pattern it found. The 3/8 system needs at least 3 of 8. Below are the **gates**, the checks every signal must pass (trading hours, minimum indicators, trend and others), and a one-line summary.

Chart

15-minute bars in New York time with entry, stop, target and levels drawn. A triangle marks the bar that triggered the signal.

Timeline

Every change: created, confirmed, and how it closed.

Open in your broker

The **Open in ...** button opens your broker's chart for the same pair, ready for you to decide.

Signal states

State	Meaning
Open	The setup has fired and the plan is live.
Confirmed	Fib Pivot only: price reached the confirmation level. Still live.
Target hit	Price reached the target. Counted as a win.
Stop hit	Price reached the stop. Counted as a loss.
Expired	The expiry rule ended the signal before target or stop was reached. Its result is measured at that bar's close.
Ambiguous	One bar touched both target and stop, so the order cannot be known. Counted as a loss, to be safe.
Invalidated	An admin marked it invalid, for example after a bad price tick. Left out of all results.

8. Levels

Open **Levels** to see the price levels the systems use for each pair: daily floor pivots, the previous day's high and low, and the Fib Pivot ladder. They are recalculated when the forex day rolls at 17:00 New York time.

Until forex prices are connected

This page has nothing to show. Levels appear after the first day roll once OANDA is connected.

9. History and results

Open **History** for every closed signal and a summary of results.

History with filters, summary and cumulative chart (sample data).

- 1 Use the **filters** to narrow by strategy, pair, direction, outcome and whether a provisional rule was involved, then select **Apply filters**.
- 2 Read the **summary**: trades, win rate, net pips, expectancy (average pips per trade) and profit factor (pips won divided by pips lost).
- 3 The **cumulative chart** shows the running total of pips over time.
- 4 Select **Export CSV** to download the filtered list for a spreadsheet. Keep the file among the owners.

Results use reference prices, before any broker spread. Signals marked invalid are left out.

10. Stocks

Open **Stocks** for the daily US stock screen. It runs after each trading day closes and lists the stocks whose trend qualifies under your stock rules.

ACC is the change since the close N sessions ago; APR annualizes it over the trader year set in the five-line rule (260 sessions by default).

The stock screen (sample tickers).

- **Session** picks which trading day to view; **Status** filters by stage (qualified, trend established, trend confirmed); **Search** finds a ticker or company name.
- Select a column header to sort. **ACC** is the change since the close N sessions ago; **APR** is that change annualised.
- Select a ticker for its detail page: the five line chart, every qualification check with its value, and the status history.

A stock's detail page (sample ticker).

Until stock prices are connected

This page is empty. After Massive is connected and the one-time history load finishes, results appear the next weekday evening.

11. Holdings

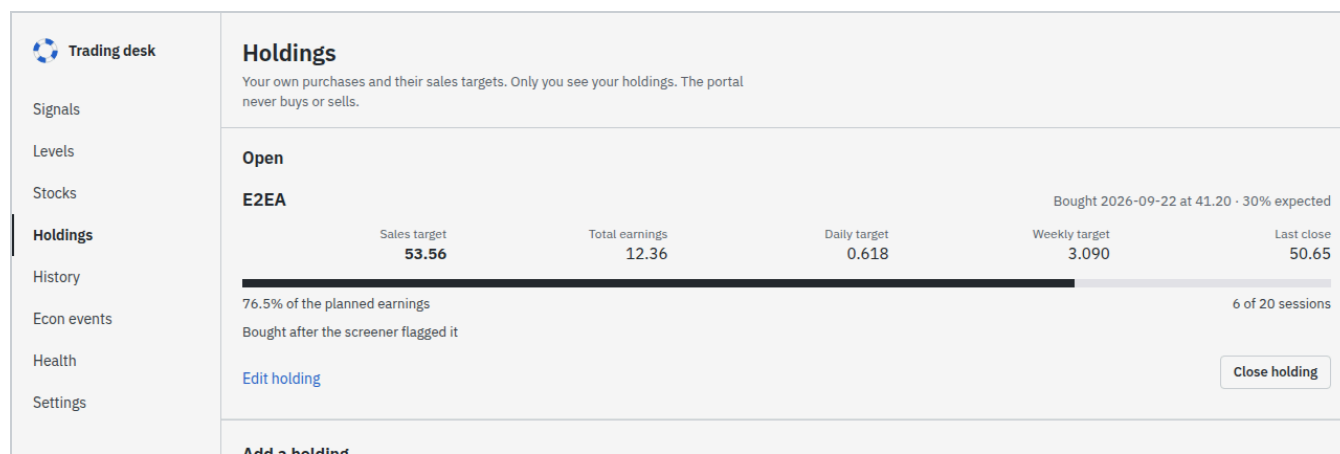

Track the stocks you actually bought. Holdings are private: other owners cannot see yours.

Add a holding

- 1 Open **Holdings** and select **Add holding**.
- 2 Fill in **Ticker**, **Purchase price** and **Purchase date**.
- 3 Adjust **Expected profit** (default 30%) and **Horizon** in trading sessions (default 20) if you wish. Add **Notes** if useful.
- 4 Save. The holding shows progress towards the sales target and sessions elapsed.

To change one, select it and edit. When you sell, select **Close holding**.

If you turned on stock alerts (section 13), you are told when a holding reaches its sales target or its time is up.

One open holding (sample data).

12. Econ events

Open **Econ events** to see economic reports by time, currency and impact. For an hour after a high-impact report for either currency of a pair, the 3/8 system applies stricter rules to new signals. Admins add and delete events here; owners can read them.

13. Notifications

Open **Settings**, then **Notifications**. Choose where alerts go, which ones you want, and when to stay quiet.

Today

Phone notifications and Telegram are not connected yet, and email reaches only the first admin (section 2). You can still save your choices now; they take effect as each channel is connected.

Channels

Channel	How to turn it on	Good to know
Push (phone or computer)	On each device, select Turn on notifications and allow notifications when asked. On iPhone, first install the portal (section 4) and open it from the Home Screen.	Per device. Select Turn off on this device to stop. If it says notifications are blocked, allow them in the browser's site settings and reload.
Telegram	Select Connect Telegram . Telegram opens a chat with the Trading desk bot; tap Start . The bot replies <i>Connected</i> . Reload the page.	Then tick Telegram under Channels. To stop, select Disconnect Telegram .
Email	Always on, to your sign-in address.	The fallback if other channels fail.

What to send

- **3/8 system signals, Fib Pivot signals, and Stock digest and holdings:** tick the ones you want.
- **Updates:** confirmations, resets and closed trades for signals you were alerted about.
- **Pairs:** all pairs, or **Only these pairs** with your chosen list.

Quiet hours

Tick *Don't send trade alerts during quiet hours* and set the start and end, in your own time zone. Alerts during quiet hours are not sent later, because an old intraday alert can mislead. Signals still appear in the portal.

Select **Save notification settings** when done.

Test it

Select **Send test notification**. Within about a minute a test arrives on every channel you turned on. You can send up to 3 tests every 10 minutes.

Recent deliveries

The bottom of the page lists recent notifications with their status. A skipped one shows the reason, for example *channel not set up on the server yet, no device has notifications turned on, Telegram not connected* or *quiet hours*.

14. Your settings

Trading desk

Settings

Signed in as e2e-owner@example.com · Admin

Profile

Name

Time zone

America/New York

Used for notification quiet hours. Signals and prices always show New York time.

Save profile

Settings (an admin's view also lists the admin pages).

Profile

Your name and **time zone**, then **Save profile**. The time zone is used for your quiet hours.

Theme

Follow this device, Light or Dark, then **Save theme**.

Broker

Choose the broker you trade with. Signal prices are adjusted by half that broker's typical spread, so entry, stop and target line up with your broker's chart, and the **Open in ...** button opens its chart.

Notifications

Section 13.

Sign out

Ends your session on this device.

15. For admins

Admins see extra pages under Settings and a few extra buttons. Every admin change is recorded in an audit log.

Users

Add an owner's email and select **Approve email**; they can then request a sign-in link. Change a person's role (owner or admin) with **Save role**, or deactivate them to remove access. The last admin cannot be demoted.

Pairs

Select **Add pair** to scan a new forex pair. Its history loads automatically within a few minutes. Turn a pair off to stop scanning it.

Brokers

Add a broker with **Save broker**: its chart link and typical spread per pair. Owners then pick it in Settings.

Rules

Every rule of the three systems, with its parameters and status. Select a rule to change a parameter;

Save new version keeps the old version on record and the scanner uses the new one from the next bar.

Approve rule turns a provisional rule into an approved one. You can also set a per-pair override, or switch a whole system off or limit it to certain pairs. Signals always record which rule versions produced them.

Signal tools

On any signal: **Mark invalid** with a reason (it then leaves all results), or **Add note**, for example when an owner disagrees with a signal.

Econ events

Add event and **Delete**.

Health

Shows the scanner's last report, each pair's last bar and recent job runs, with any error in plain view. If the scanner stops for more than 5 minutes, admins are emailed (and messaged on Telegram if linked), and again when it recovers.

 Trading desk	Health ● Health	
	Forex open - In 3/8 window until 10:30 - 06:23 NY

16. Questions and fixes

I didn't get a sign-in email.

Check spam. Make sure your email is approved (ask an admin). Today, only the first admin can receive links (section 2).

The price in the portal differs from my broker.

Choose your broker in Settings so prices are adjusted for its spread. Small differences remain because brokers quote slightly differently.

No signals are showing.

Check the status line: the market may be closed, or it may be outside the 3/8 window. Check Health for stale data. Until forex prices are connected, there are no signals at all.

Health says "No bars yet" or a pair is stale.

Before OANDA is connected this is expected. Afterwards, it clears on its own when data resumes; an admin can check Health for errors. On Sunday evening, pairs show stale until the first bar completes at 17:15 New York time.

"Push notifications aren't set up on the server yet."

Expected until push is connected. Use email meanwhile.

"Telegram isn't set up on the server yet."

Expected until the Telegram bot is connected.

My iPhone has no "Turn on notifications" button.

Install the portal from Safari to the Home Screen and open it from there (section 4).

An alert arrived late, or not at all.

Check quiet hours, the pairs and systems you chose, and Recent deliveries in Settings, Notifications.

What does "Provisional" mean?

The rule's exact definition is still under review. During the paper run the owners decide whether to approve, change or switch it off.

17. Words used in the portal

Pip

The smallest standard price step for a pair, for example 0.0001 for EUR/USD and 0.01 for USD/JPY.

Entry, stop, target

Where to get in, where the idea is wrong, and where to take profit.

R:R (reward to risk)

Target distance divided by stop distance. 2.74 means the target is 2.74 times as far as the stop.

3/8 system

Fires when at least 3 of 8 indicators agree during the trading window and every gate passes.

Fib Pivot

Trades from a ladder of Fibonacci levels built on the day's pivot.

Indicator

One reason a setup may be valid, such as a candlestick pattern or a pivot touch.

Gate

A check every signal must pass, such as trading hours or trade with the trend.

Provisional

A rule still waiting for owner approval.

Reference price

The price from the data feed, before any broker adjustment.

Expectancy

Average pips won or lost per closed signal.

Profit factor

Total pips won divided by total pips lost.

Trading day

Forex days run 17:00 to 17:00 New York time.

Paper run

Weeks of watching signals without trading them, to judge quality.

Trading desk suggests trades from your own rules. It does not place trades and does not guarantee results. Every decision is yours. Keep this guide, the portal and its alerts among the owners.
