14 Questions and fixes

15 Words used in the portal

What changed in this edition

- **Today's qualifiers.** The Stocks page now opens with the stocks qualifying for the first time, then screen results, the watch list, open buys and closed buys.
- **A wider buy window around the qualifying date.** Votes from up to 4 sessions before a stock qualifies now count during its first 4 sessions on the watch list.
- **A new trailing stop.** It starts once a trade is 5% up and sits 10% under the highest close.
- **Seven indicators.** A buy now needs 3 of 7 (the change in direction candle, MACD, your pivot point MA crossover, RSI, Stochastics, a moving average crossover and a volume spike).
- **A longer watch list.** A stock stays watched for 60 sessions, about three months, and can be bought at any distance from its high.
- **Same-evening results** with the paid data plan, and five years of chart history.
- **A new price chart** with indicator panes, weekly and monthly views, and zoom.
- **Health on your phone,** in the tab bar.

> **About the screenshots.** The pictures in this guide come from a test copy of the portal filled with sample data. The tickers (SMPA, SMPR and so on), company names, prices and results are made up. Your screens show real US stocks.

01

What Trading desk does

Trading desk is your private portal for the stock system. Every trading evening it checks every US common stock against your rules, tells you which stocks to watch and when the indicators say buy, and then follows each buy until a stop or the indicators say sell.

What it does

- **Screens US stocks every trading day** at 6:30 pm New York time, after the close. It covers active common stocks on the NYSE, Nasdaq and NYSE American.
- **Lists today's new qualifiers,** the stocks qualifying for the first time.
- **Builds a watch list** of strong stocks near their 52-week high that pass the 10-week momentum test.
- **Suggests a buy** when at least 3 of 7 indicators agree, and shows exactly which ones fired.
- **Follows every buy to its exit:** the 5% stop, the trailing stop, or a sell signal.
- **Watches your own holdings** with the same stops, using the price you paid.
- **Alerts you** on Telegram, by phone notification or by email.

What it does not do

- **It never places trades.** There is no connection to any trading account. Every decision is yours.
- **It does not guarantee results.** Past or simulated results do not predict future results.
- **It is not for sharing.** Access is limited to the approved owners. Please keep alerts, screenshots and results among the owners.

Forex is paused. The forex systems are switched off and their pages hidden, at the owners' request. Nothing was deleted; an admin can resume forex in Settings.

02

What works today

The portal runs on its staging address while the owners use it. A business web address and business email come later.

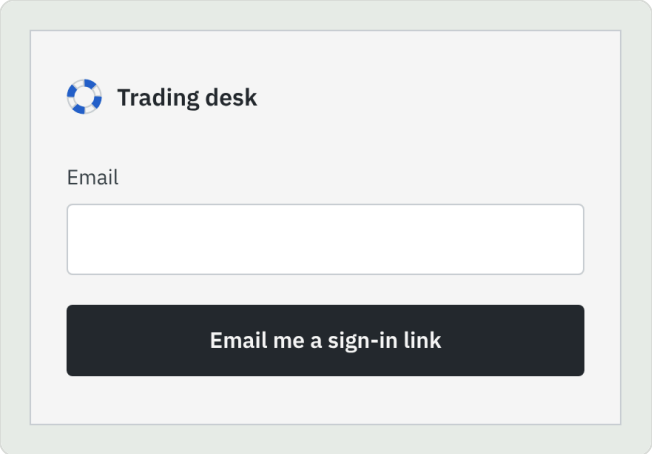

PART	STATUS	WHAT YOU GET NOW
Portal	Live	Stocks, Holdings, Health and Settings, on computer and phone.
Stock prices	Live	The paid Massive plan: every US common stock, with up to five years of history. Results arrive the same evening, at about 6:30 pm New York time.
Telegram alerts	Live	Connect once in Settings, Notifications (section 11). The fastest way to get alerts on a phone.
Phone notifications	Being set up	If the button says push isn't set up on the server yet, use Telegram meanwhile.
Email	Partly	Reaches every owner once the business email is set up.

03

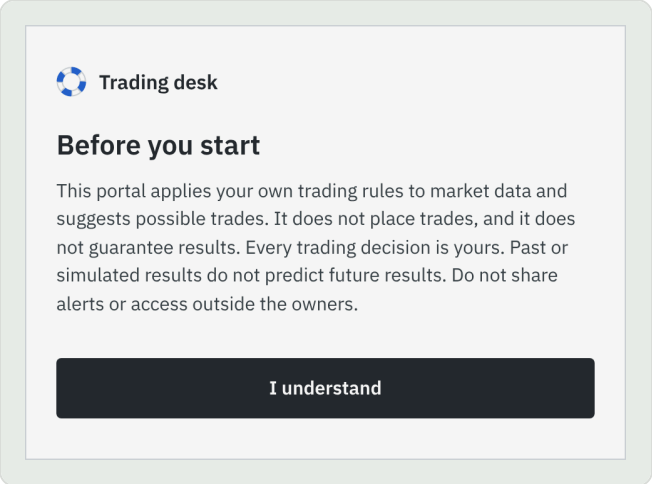

Signing in

There are no passwords. You sign in with a one-time link that an admin sends you.

1. An admin sends you a link by text or message. It works once and lasts 24 hours.
2. Open the link and select **Sign in**. (The extra tap stops a message preview from using up your link.)
3. The first time, read the notice and select **I understand**. You land on the Stocks page.

The sign-in page. Requesting a link by email works once the business email is set up.

The one-time notice.

You stay signed in for 30 days on each device. To sign out, open Settings and select **Sign out**.

YOU SEE	WHAT IT MEANS
That sign-in link has expired or was already used	Each link works once, for 24 hours. Ask an admin for a new one.
This email isn't approved	Only approved emails can sign in. Ask an admin to add yours in Settings, Users.

> Never forward a sign-in link. Anyone holding it can sign in as you until it is used or expires.

04

Put it on your phone

The portal works in any browser. Adding it to your Home Screen makes it open like an app, and on iPhone it is needed before phone notifications can be turned on.

iPhone and iPad

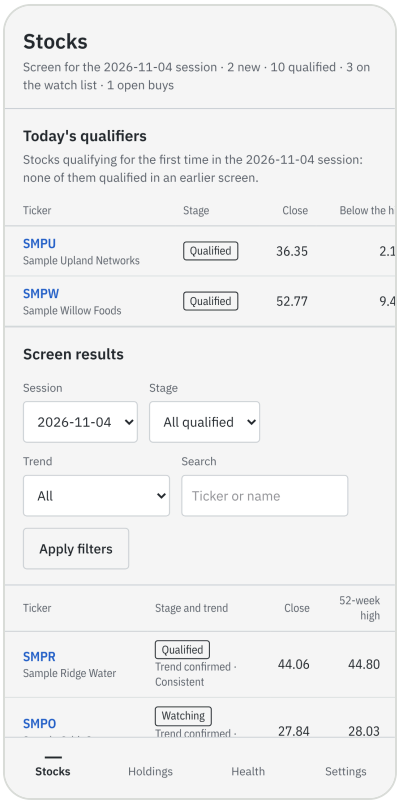

1. Open the portal in **Safari** and sign in.
2. Tap the **Share** button.
3. Choose **Add to Home Screen**, then **Add**.
4. Open Trading desk from your Home Screen. It has its own sign-in, so you may need a new link from an admin.

Android

1. Open the portal in **Chrome** and sign in.
2. Open the ⋮ menu.
3. Choose **Install app** or **Add to Home screen**.
4. Open Trading desk from your Home Screen.

Finding your way around

On a phone, the tab bar at the bottom has **Stocks**, **Holdings**, **Health** and **Settings**. On a computer, the same pages are in the menu on the left.

The Stocks page on a phone, with the tab bar at the bottom.

05

Reading the portal

A few conventions hold on every page.

PAGE	WHAT IT IS FOR
Stocks	Today's qualifiers, the day's screen results, the watch list, open buys and closed buys. Select any ticker for its own page.
Holdings	The stocks you actually bought, with the stop that applies now. Private to you.
Health	Whether the scanner is running and when the last stock screen finished.
Settings	Your profile, notifications, theme and sign out, plus the admin pages.

- ▲ **Buy** is shown in blue with an up arrow and the word, so colour is never the only clue.
- Provisional marks a rule whose exact setting the owners have not confirmed yet. A buy that relied on one shows the badge.
- All times and dates are New York time. A **session** is one US trading day.
- The dot next to **Health** is green when all is well, amber when something needs a look, and red when the scanner has stopped.

06

How the stock system works

The system works like a funnel. A stock moves on only after passing the stage before. Every number here is a setting an admin can change in Settings, Rules.

STAGE	WHAT HAS TO BE TRUE
1. Qualified	The close is within 10% of the 52-week high, the 52-week high is at least twice the low, and the yearly pace (APR) is at least 100%.
2. 10-week momentum	Tested on each Friday close (Thursday when Friday is a holiday). Looking back 1 to 10 weeks, at least 5 of those weeks must show a yearly pace of 455% or more: the pace of a 35% gain in 20 sessions. That Friday is the qualifying date.
3. Watch list	The stock is watched for 60 sessions (about three months) from its qualifying date, even if it dips. A new qualifying date restarts the 60 sessions.
4. Buy	While watched, a buy fires when 3 of the 7 indicators below voted within the last 3 sessions; in the first 4 sessions after the qualifying date, votes count from 4 sessions before it. The buy is at that session's close.
5. Hold	The portal shows a projection of 35% above the buy price within 20 sessions. It is a guide, not an exit: the trade rides on.
6. Sell	The first of: the 5% stop, the trailing stop once the trade is up 5%, or a sell signal (3 of 7 indicators the other way). Section 9 explains each.

The seven indicators

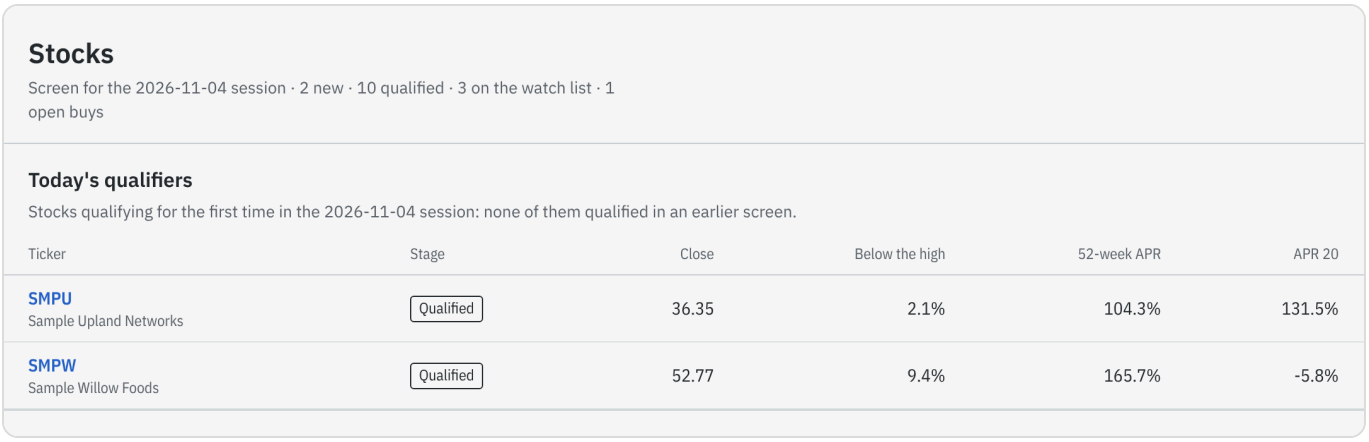

INDICATOR	VOTES TO BUY WHEN	VOTES TO SELL WHEN
Change in direction candle	The close is above the previous session's high	The close is below the previous session's low
MACD crossover (12, 26, 9)	The MACD line crosses above its signal line	It crosses below
Pivot point crossover	Your pivot MA (10-session average of each day's pivot) crosses above its 3-session signal line	It crosses below
RSI (14)	RSI crosses back above 30	RSI crosses below 70
Stochastics (14, 3, 3)	%K crosses above %D, both below 20	%K crosses below %D, both above 80
Moving average crossover	The 10-session average crosses above the 20-session average	It crosses below
Volume spike	Volume is 1.5 times the 20-session average on an up close	The same spike on a down close

Each indicator counts once in the window, however often it fired. Everything uses finished trading days and closing prices.

07

The Stocks page

Open Stocks any evening after about 6:30 pm New York time to see that day's results. The line under the title gives the session and how many stocks are new, qualified, watched and bought. The page reads from top to bottom in five sections.

Stocks

Screen for the 2026-11-04 session · 2 new · 10 qualified · 3 on the watch list · 1 open buys

Today's qualifiers

Stocks qualifying for the first time in the 2026-11-04 session: none of them qualified in an earlier screen.

Ticker	Stage	Close	Below the high	52-week APR	APR 20
SMPU Sample Upland Networks	Qualified	36.35	2.1%	104.3%	131.5%
SMPW Sample Willow Foods	Qualified	52.77	9.4%	165.7%	-5.8%

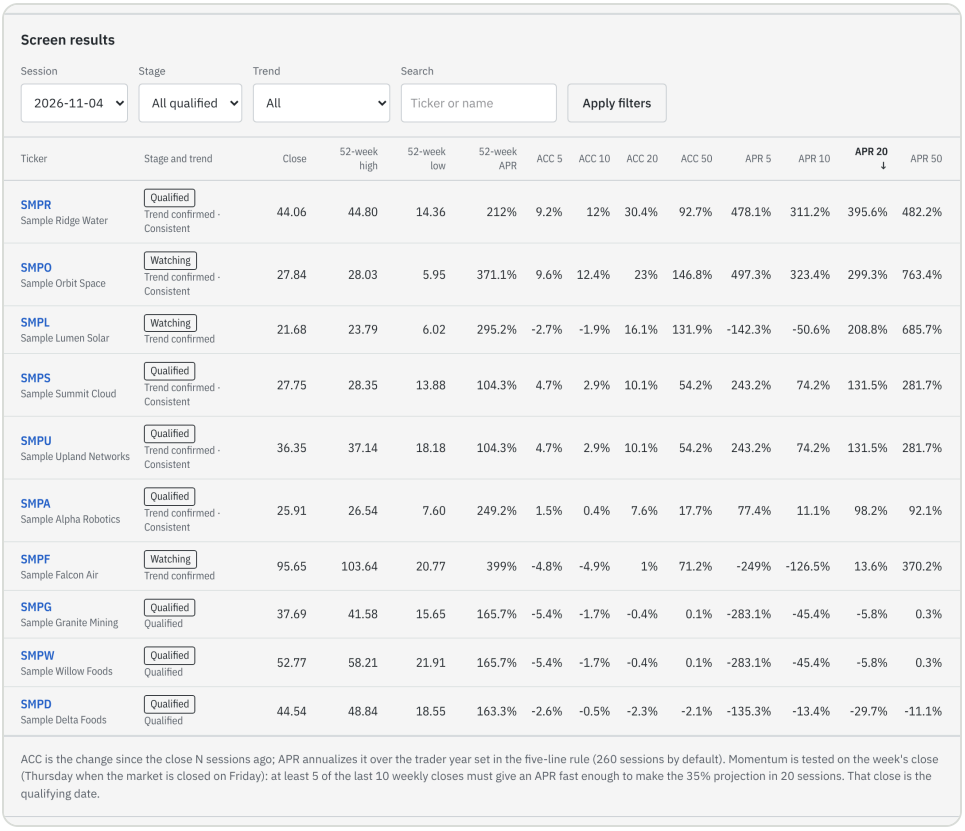

Today's qualifiers: two stocks qualifying for the first time (sample data).

1. Today's qualifiers

Stocks qualifying for the **first time**: none of them appeared in an earlier screen. Best 20-session APR first. Use this list to spot newcomers before they reach the watch list.

The columns

Stage (Qualified, Momentum or Watching), the close, **Below the high** (how far the close is under the 52-week high), the 52-week APR and APR 20. Select a ticker for its page.

Screen results

Session: 2026-11-04 | Stage: All qualified | Trend: All | Search: Ticker or name | Apply filters

Ticker	Stage and trend	Close	52-week high	52-week low	52-week APR	ACC 5	ACC 10	ACC 20	ACC 50	APR 5	APR 10	APR 20 ↓	APR 50
SMPR Sample Ridge Water	Qualified Trend confirmed · Consistent	44.06	44.80	14.36	212%	9.2%	12%	30.4%	92.7%	478.1%	311.2%	395.6%	482.2%

SMPW Sample Willow Foods	Qualified Qualified	52.77	58.21	21.91	165.7%	-5.4%	-1.7%	-0.4%	0.1%	-283.1%	-45.4%	-5.8%	0.3%
SMPD Sample Delta Foods	Qualified Qualified	44.54	48.84	18.55	163.3%	-2.6%	-0.5%	-2.3%	-2.1%	-135.3%	-13.4%	-29.7%	-11.1%

ACC is the change since the close N sessions ago; APR annualizes it over the trader year set in the five-line rule (260 sessions by default). Momentum is tested on the week's close (Thursday when the market is closed on Friday): at least 5 of the last 10 weekly closes must give an APR fast enough to make the 35% projection in 20 sessions. That close is the qualifying date.

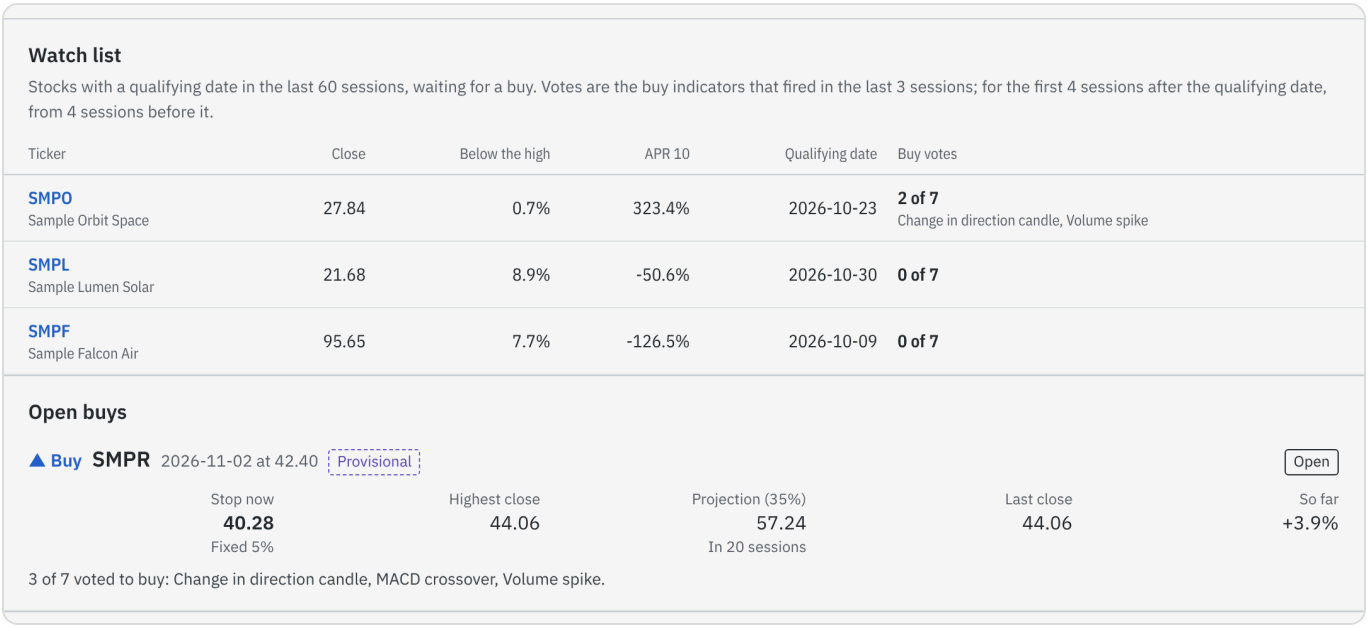

Screen results (sample data).

2. Screen results

Every stock that qualified that session. Use **Session** to look at an earlier day (Today's qualifiers and the watch list follow it), **Stage** and **Trend** to filter, and **Search** for a ticker or company, then select **Apply filters**. Select a column header to sort.

ACC and APR

ACC is the change since the close 5, 10, 20 or 50 sessions ago. APR is the same change at a yearly pace. They are background; the watch list uses the 10-week test.

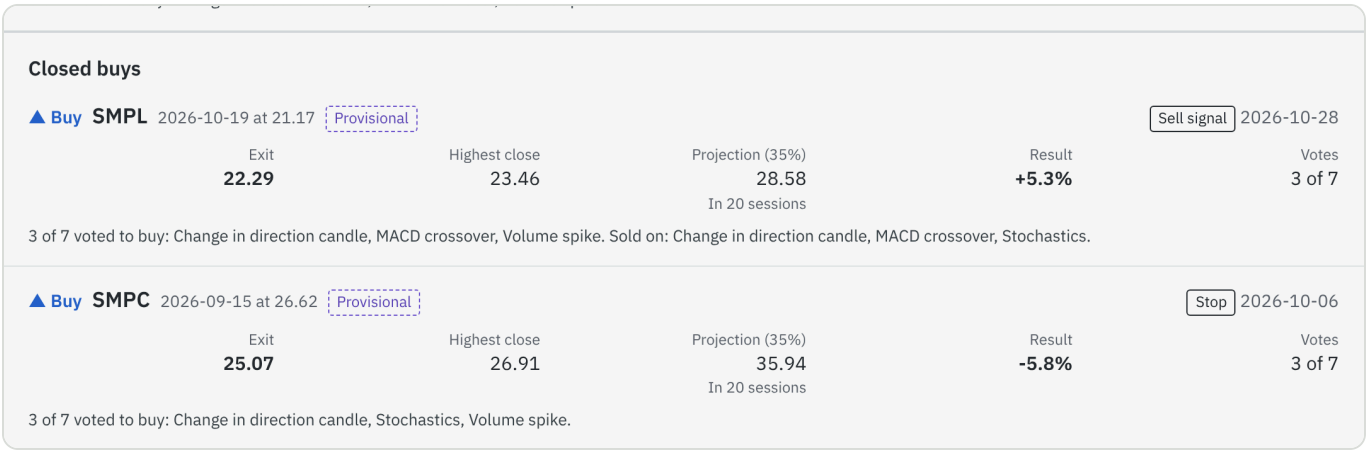

The watch list and open buys (sample data).

3. Watch list

Stocks that passed the 10-week test in the last 60 sessions and are waiting for a buy. **Buy votes** shows how many of the 7 indicators fired in the buy window (the last 3 sessions, or from 4 sessions before the qualifying date during the 4 sessions after it), and which. At 3 of 7, a buy fires.

4. Open buys

Each buy that has not exited yet: the buy date and price, **Stop now** (with Fixed 5% or Trailing under it), the highest close since the buy, the projection, the last close and the result so far. The last line names the indicators that voted.

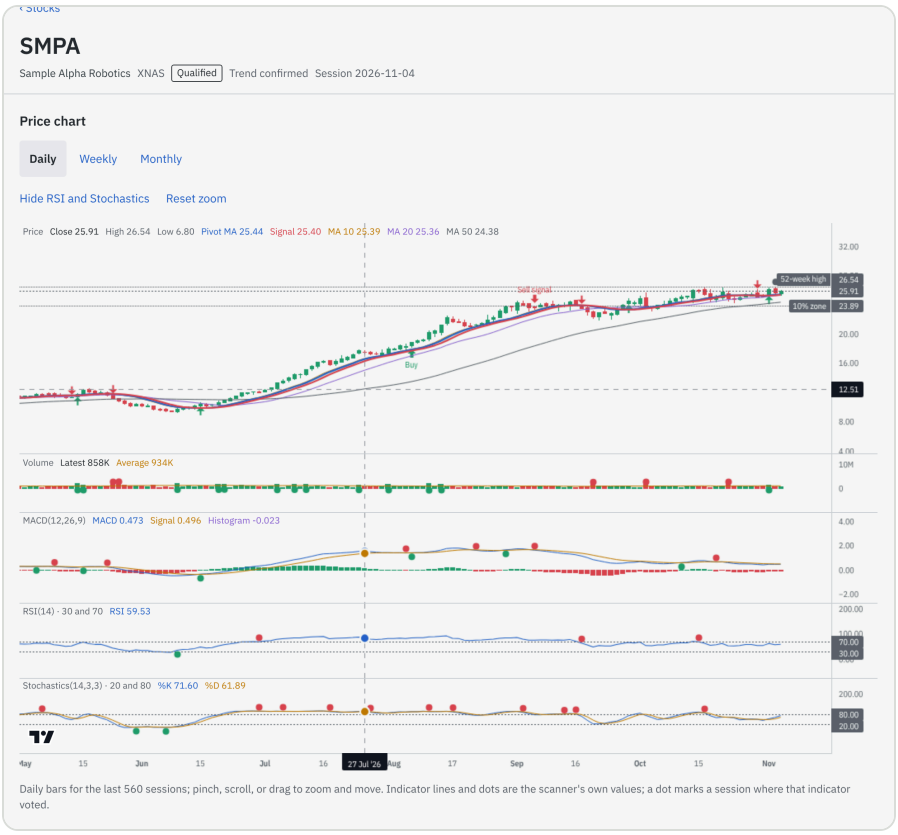

5. Closed buys, with how each one ended (sample data).

> On many days nothing new qualifies, nothing joins the watch list and no buy fires. The rules are strict on purpose; an empty list is not a fault.

08

A stock's page

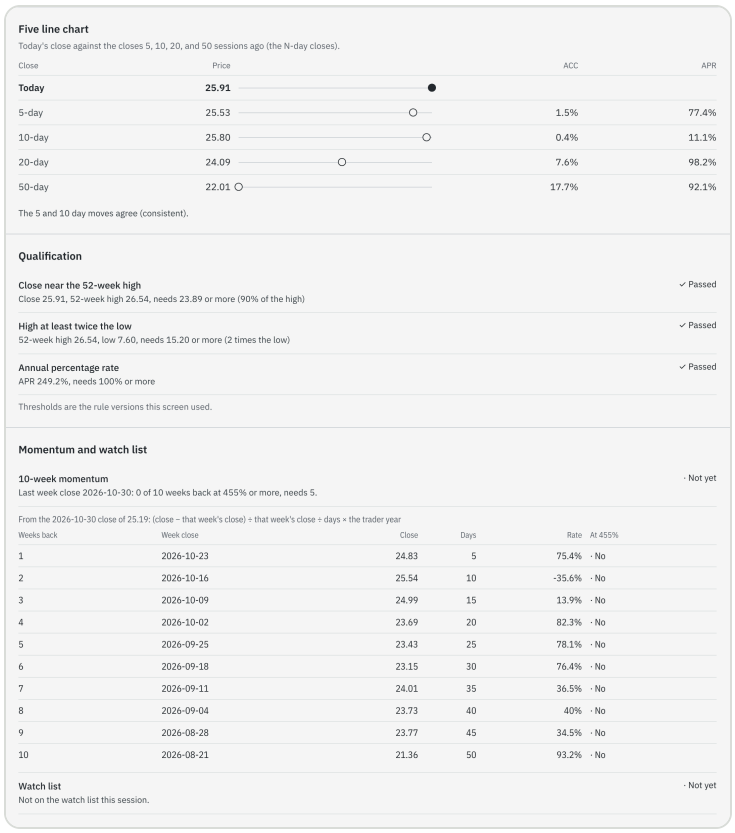

Select a ticker anywhere in the portal to see every check the system made on it, with the numbers, and a chart of the indicators it voted with.

The price chart with the indicator panes (sample data).

Reading the chart

- **Price:** daily candles with your pivot MA and its signal line (the band between them is green while the pivot MA is above, red while below), and the 10, 20 and 50-session averages.
- **Lines across the chart:** the 52-week high, the 10% zone, and the stop for an open buy. Buy and sell arrows mark the system's trades.
- **Panes below:** volume with its average, MACD, and (with **Show RSI and Stochastics**) RSI and Stochastics with their levels.
- **Dots** mark the sessions where an indicator voted: green for buy, red for sell.
- **Daily, Weekly, Monthly:** switch the candles. Buys and sells are always decided on daily bars.
- **Zoom:** pinch, scroll or drag to look back up to five years. **Reset zoom** returns to the last six months.

Five line chart

Today's close against the closes 5, 10, 20, and 50 sessions ago (the N-day closes).

Close	Price	ACC	APR
Today	**25.91**		
5-day	25.53	1.5%	77.4%
10-day	25.80	0.4%	11.1%
20-day	24.09	7.6%	98.2%
50-day	22.01	17.7%	92.1%

The 5 and 10 day moves agree (consistent).

Qualification

Close near the 52-week high — ✓ Passed
Close 25.91, 52-week high 26.54, needs 23.89 or more (90% of the high)

High at least twice the low — ✓ Passed
52-week high 26.54, low 7.60, needs 15.20 or more (2 times the low)

Annual percentage rate — ✓ Passed
APR 249.2%, needs 100% or more

Thresholds are the rule versions this screen used.

Momentum and watch list

10-week momentum — · Not yet
Last week close 2026-10-30: 0 of 10 weeks back at 455% or more, needs 5.

From the 2026-10-30 close of 25.19: (close − that week's close) ÷ that week's close ÷ days × the trader year

Weeks back	Week close	Close	Days	Rate	At 455%
1	2026-10-23	24.83	5	75.4%	· No
2	2026-10-16	25.54	10	-35.6%	· No
3	2026-10-09	24.99	15	13.9%	· No
4	2026-10-02	23.69	20	82.3%	· No
5	2026-09-25	23.43	25	78.1%	· No
6	2026-09-18	23.15	30	76.4%	· No
7	2026-09-11	24.01	35	36.5%	· No
8	2026-09-04	23.73	40	40%	· No
9	2026-08-28	23.77	45	34.5%	· No
10	2026-08-21	21.36	50	93.2%	· No

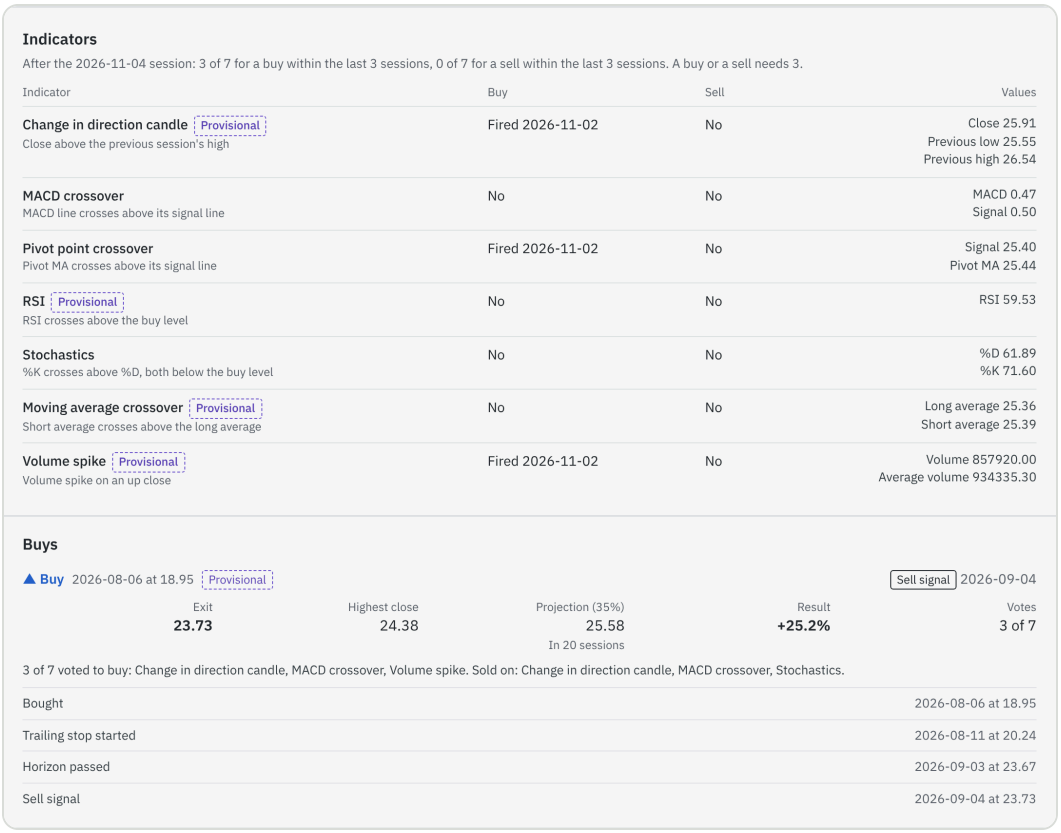

Watch list — · Not yet
Not on the watch list this session.

The five line chart, qualification and the 10-week test (sample data).

The chart on a phone, with the tab bar.

Below the chart: the **five line chart** (today's close against the closes 5, 10, 20 and 50 sessions ago), each **qualification** rule with its numbers and Passed or not, and the **10-week test**, one row per week back. A stock passes when at least 5 of the 10 rows say Yes.

Indicators

After the 2026-11-04 session: 3 of 7 for a buy within the last 3 sessions, 0 of 7 for a sell within the last 3 sessions. A buy or a sell needs 3.

Indicator	Buy	Sell	Values
Change in direction candle Provisional Close above the previous session's high	Fired 2026-11-02	No	Close 25.91 Previous low 25.55 Previous high 26.54
MACD crossover MACD line crosses above its signal line	No	No	MACD 0.47 Signal 0.50
Pivot point crossover Pivot MA crosses above its signal line	Fired 2026-11-02	No	Signal 25.40 Pivot MA 25.44
RSI Provisional RSI crosses above the buy level	No	No	RSI 59.53
Stochastics %K crosses above %D, both below the buy level	No	No	%D 61.89 %K 71.60
Moving average crossover Provisional Short average crosses above the long average	No	No	Long average 25.36 Short average 25.39
Volume spike Provisional Volume spike on an up close	Fired 2026-11-02	No	Volume 857920.00 Average volume 934335.30

Buys

▲ Buy 2026-08-06 at 18.95 Provisional — Sell signal 2026-09-04

Exit	Highest close	Projection (35%)	Result	Votes
23.73	24.38	25.58 In 20 sessions	**+25.2%**	3 of 7

3 of 7 voted to buy: Change in direction candle, MACD crossover, Volume spike. Sold on: Change in direction candle, MACD crossover, Stochastics.

Bought	2026-08-06 at 18.95
Trailing stop started	2026-08-11 at 20.24
Horizon passed	2026-09-03 at 23.67
Sell signal	2026-09-04 at 23.73

The seven indicators after the latest session, and the buy they produced (sample data).

The **Indicators** table shows, for each of the 7, whether it fired for a buy or a sell within its window and the values behind it. The line above the table says how many sessions the buy window covered that day. Further down are the stock's buys with every event, its stage history, and **Add to holdings** (section 10).

09

Buys, stops and sells

After a buy, the system checks the trade after every close. The same rules apply to the system's buys and to your own holdings.

RULE	WHAT HAPPENS
Fixed stop	A close at or below 5% under the buy price ends the trade. Shown as **Stop**.
Trailing stop	Once a close reaches 5% above the buy price, the stop follows 10% under the highest close since the buy and rises with it. It never falls: it stays at the fixed stop until 10% under the highest close is higher. Shown as **Trailing stop**.
Sell signal	At least 3 of the 7 indicators vote to sell within 3 sessions. Shown as **Sell signal**.
Projection	35% above the buy price. When a close first reaches it you get an information alert, but the trade carries on.

A worked example

1. Buy at 20.00. The fixed stop is 19.00 (5% under).
2. A close of 21.00 is 5% up and the trailing stop starts. 10% under 21.00 is 18.90, so the stop stays at 19.00.
3. At a close of 22.00 the stop is 19.80. The price climbs to 26.00: the stop is now 23.40.
4. A later close at 23.40 ends the trade with a trailing stop, 17% up.

Why stops use the close

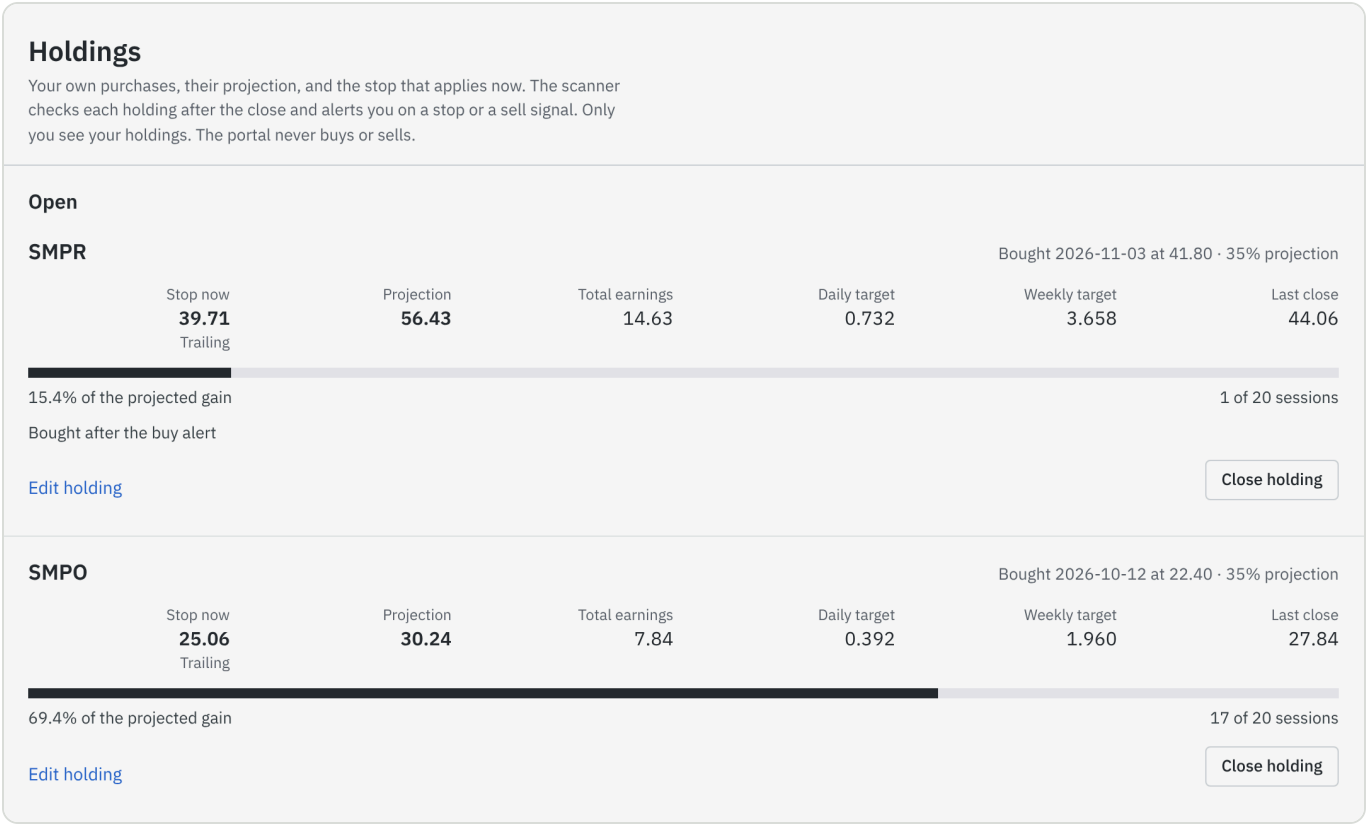

Stops are checked on the closing price, not during the day. We tested both over three years of history: stopping during the day cut the size of each stopped loss, but it also closed many trades that recovered by the close, including big winners. Checking on the close came out clearly ahead, so it stays.

> Results and alerts arrive the same evening. If you act on one, you trade the next day, so your price may differ from the one in the portal.

10

Holdings

Record the stocks you actually bought, and the portal watches them with the same stops and sell signals, using your own purchase price. Holdings are private: other owners cannot see yours.

Two open holdings on trailing stops. SMPR's is still at its fixed stop level, because 10% under its highest close is lower (sample data).

Add a holding

1. On a stock's page use **Add to holdings**, or open Holdings and fill in **Add a holding**.
2. Enter the **Ticker**, **Purchase price** and **Purchase date** from your broker.
3. Leave **Projection** (35%) and **Horizon** (20 sessions) as they are, or change them. Add **Notes** if useful.
4. Select **Add holding**.

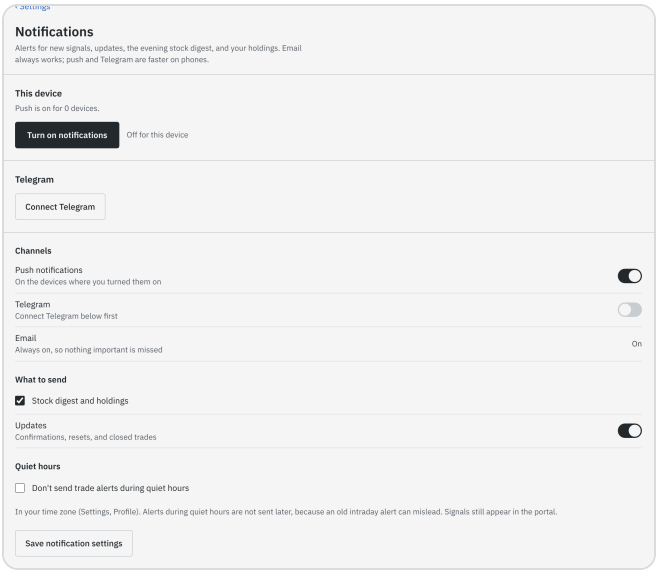

Reading a holding

- **Stop now** is the stop after the last close, marked Fixed or Trailing.
- **Projection**, **Total earnings**, **Daily target** and **Weekly target** come from your price and projection.
- The bar shows how much of the projected gain you have reached, and how many horizon sessions have passed.
- When a stop or sell signal is hit, a note appears and you get an alert. Once you have sold with your broker, select **Close holding**. **Edit holding** fixes a price or date.

11

Notifications

Open Settings, then Notifications. Choose where alerts go, which ones you want, and when to stay quiet.

Settings, Notifications.

Connect Telegram (recommended)

1. Install Telegram on your phone if you do not have it.
2. Select **Connect Telegram**. Telegram opens a chat with the Trading desk bot.
3. Tap **Start**. The bot replies that you are connected.
4. Telegram alerts are now on. Select **Send test notification** to check.

To stop, select **Disconnect Telegram**.

Other channels

- **Push:** on each device select **Turn on notifications** and allow them. On iPhone, add the portal to your Home Screen first (section 4).
- **Email:** always on, to your sign-in address, once the business email is set up.

What you are sent

- **Stock digest and holdings:** each evening's new watch list stocks, every buy and how it exits, and the stops and sell signals on your holdings.
- **Updates:** follow-ups on alerts you already received.
- **Quiet hours:** set them in your own time zone. Alerts in quiet hours are not sent later; everything still shows in the portal.

Select **Save notification settings** when done. **Recent deliveries** lists what was sent to you, and why if something was skipped.

12

Your settings

Settings also holds your own preferences.

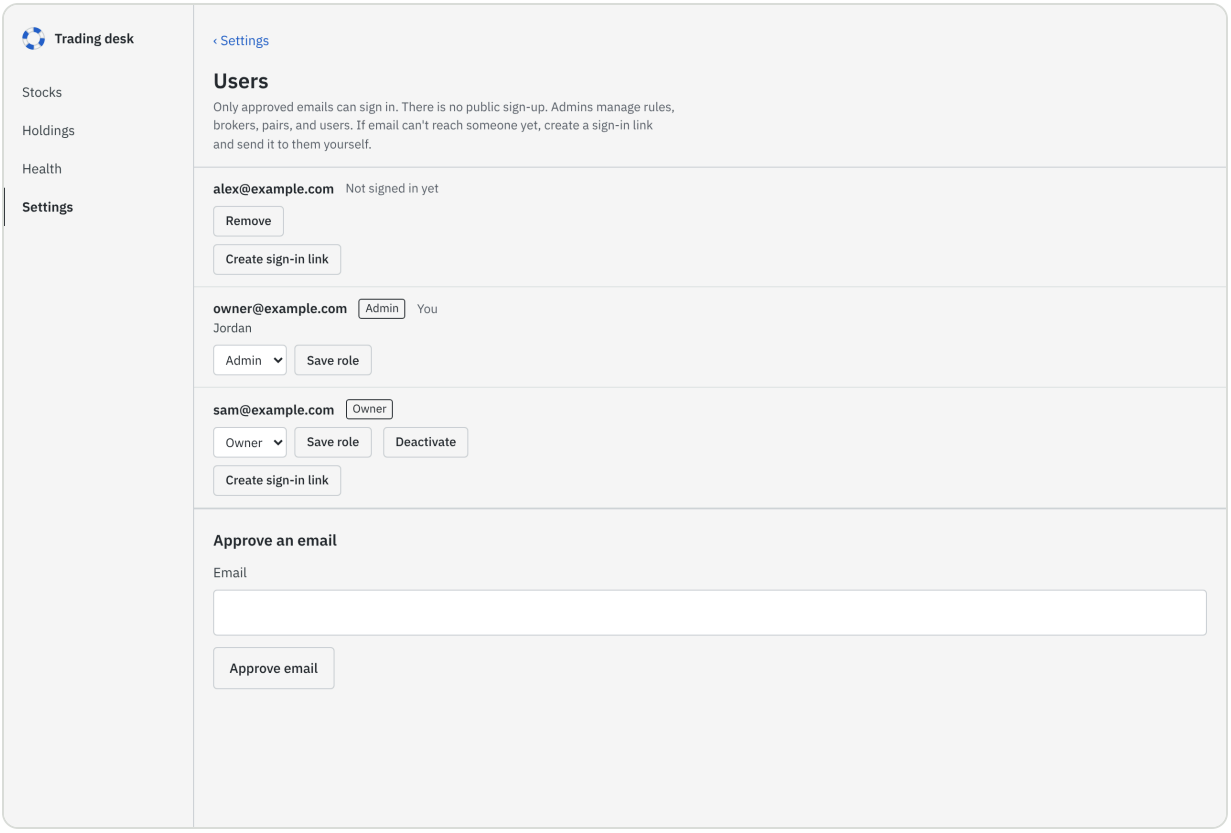

Profile: your name and time zone, then **Save profile**. The time zone is used for quiet hours; prices and dates always show New York time.

Theme: Follow this device, Light or Dark, then **Save theme**. **Sign out** ends your session on this device.

13

For admins

Admins see extra pages under Settings. Every admin change is recorded in an audit log.

Settings, Users (sample emails).

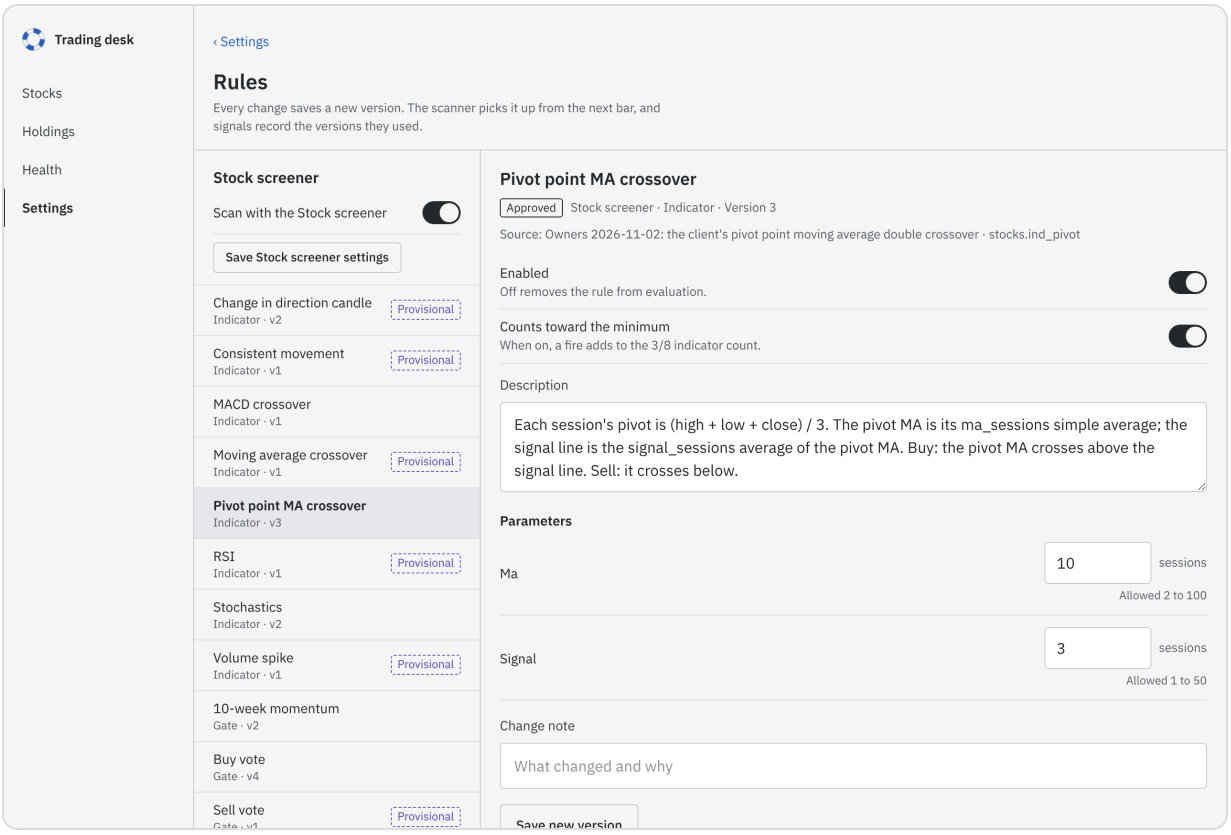

Let a new owner in

1. Open Settings, Users. Under **Approve an email**, enter the email and select **Approve email**.
2. On their row, select **Create sign-in link**, then **Copy link**.
3. Send it by text or message. It works once, for 24 hours.

Change a role with **Save role**, or **Deactivate** someone to remove access. The last admin cannot be demoted.

Rules

Every rule of the stock system with its settings and status. Select a rule to change a setting; **Save new version** keeps the old version on record, and the next screen uses the new one. Every buy records the rule versions that produced it.

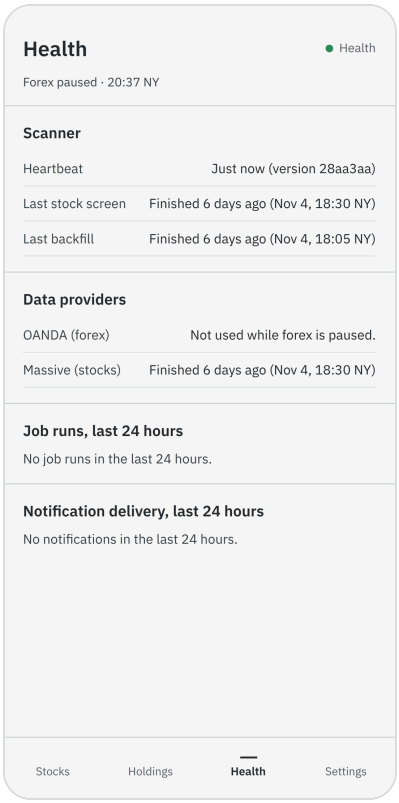

Settings, Rules, with the pivot point MA crossover open.

Health

Every owner can open Health, on a computer or in the phone tab bar. It shows the scanner's heartbeat, the last stock screen and backfill, recent job runs and notification deliveries.

If the scanner stops for more than 5 minutes, admins are alerted, and again when it recovers. The dot next to Health on every page turns amber or red when something needs a look.

> If Last stock screen is not from this evening by 11 pm New York time, check again after the 6:30 am catch-up the next morning before raising it.

Health on a phone (sample data).

14

Questions and fixes

The questions owners ask most.

My sign-in link says it has expired or was already used.
Each link works once and lasts 24 hours. Ask an admin for a new one, and open it on the device you want to use.

The Stocks page still shows yesterday.
Each trading day is screened from 6:30 pm New York time. If prices are late, the screen retries every 15 minutes until 11 pm, and a 6:30 am run catches up anything missed. Health shows the time of the last stock screen.

Today's qualifiers, the watch list or the buys are empty.
Normal on many days. Few stocks qualify for the first time or pass the 10-week test, and a buy needs 3 of 7 indicators.

A stock I know is missing from Today's qualifiers.
The list shows only first-time qualifiers. A stock that qualified in any earlier screen appears in Screen results instead.

A stock left the watch list.
Its 60 sessions ran out, or it was bought.

The buy price differs from what I paid.
The portal uses the session's close. Record your actual price in Holdings, and the stops follow your price.

I connected Telegram but get nothing.
Select **Send test notification**. If nothing arrives, check Recent deliveries for the reason, then disconnect and connect again.

My iPhone has no Turn on notifications button.
Add the portal from Safari to the Home Screen and open it from there (section 4).

What does Provisional mean?
The owners have not yet confirmed that rule's exact setting. Until they do, a buy that relied on it carries the badge.

15

Words used in the portal

A short glossary.

Session
One US trading day. The portal works on each session's closing prices.

Week's close
The Friday close, or Thursday when Friday is a market holiday.

Qualifying date
The week's close on which a stock passed the 10-week test.

APR
A change expressed at a yearly pace, using 260 trading days.

Buy window
The last 3 sessions. From the qualifying date through 4 sessions after it, from 4 sessions before the qualifying date.

Pivot MA
The 10-session average of each day's pivot, (high + low + close) / 3.

Stop now
The stop that applies after the last close: fixed 5%, or trailing.

Sell signal
At least 3 of 7 indicators voting to sell within 3 sessions.

Qualified
Within 10% of the 52-week high, with the high at least twice the low and a 100% yearly pace.

Today's qualifier
A stock qualifying for the first time: it was in no earlier screen.

Watch list
Stocks waiting for a buy, for 60 sessions after their qualifying date.

Indicator vote
One of the 7 indicators firing within the buy window: the last 3 sessions, or wider around the qualifying date.

Buy
At least 3 of 7 buy votes while a stock is watched.

Projection
35% above the buy price within 20 sessions. A guide, not an exit.

Trailing stop
10% under the highest close, once a trade is up 5%. It never falls, and never sits below the fixed stop.

Provisional
A rule setting the owners have not confirmed yet.

Trading desk suggests trades from your own rules. It does not place trades and does not guarantee results. Every decision is yours. Please keep this guide, the portal and its alerts among the owners.
