About the screenshots

The pictures in this guide come from a test copy of the portal filled with sample data. The tickers (E2EA, E2EB, E2EC), company names, prices and results in them are made up. Your screens show real US stocks.

What changed in this edition. The portal now runs the owners' stock system: the 10-week momentum test, the watch list, buys on 3 of 5 indicators, and the 5 percent stop and trailing stop. Forex is paused and hidden. Owners sign in with a link an admin sends them. Connecting Telegram now turns Telegram alerts on by itself.

1. What Trading desk does

Trading desk is a private portal for the owners. Every trading day it checks every US common stock against your stock rules, tells you which ones are worth watching and when the indicators say buy, and then follows each buy until a stop or the indicators say sell.

What it does

- **Screens US stocks once a day**, after the close, at 6:30 pm New York time. It covers active common stocks on the NYSE, Nasdaq and NYSE American.
- **Builds a watch list** of strong stocks near their 52-week high that pass the 10-week momentum test.
- **Suggests a buy** when at least 3 of 5 indicators agree during a pullback, and shows why.
- **Follows every buy** to its exit: the 5 percent stop, the trailing stop, or a sell signal from the indicators.
- **Watches your own holdings** with the same stops and sell signals, using the price you paid.
- **Alerts you** by phone notification, Telegram or email, following your own preferences.

What it does not do

- **It never places trades.** There is no connection to any trading account. Every decision is yours.
- **It does not guarantee results.** Past or simulated results do not predict future results.
- **It is not for sharing.** Access is limited to the approved owners. Do not forward alerts, screenshots or results to anyone else.

Forex is paused

The forex systems (3/8 and Fib Pivot) are switched off and their pages are hidden, at the owners' request. Nothing was deleted. An admin can resume forex in Settings, and every forex page comes back as it was.

> You see this same promise on the notice screen the first time you sign in. Select **I understand** once to continue.

2. What works today

The portal runs on its staging address while the owners test it. A real web address and business email come later. This table shows what works now.

Part	Status	What you see now	Later
Portal	Live	Stocks, Holdings, Health and Settings all open.	Moves to the business's own web address.
Signing in	Live	An admin sends you a sign-in link by text or message (section 3).	With the business email set up, you can also request a link by email.
Stock prices (Massive)	Live	Daily prices for every US common stock, with two years of history.	No change.
Telegram alerts	Being set up	Once the bot is added, a **Connect Telegram** button works in Settings, Notifications (section 11).	The fastest way to get alerts on a phone today.
Phone notifications (push)	Not yet	If the button replies that push isn't set up on the server yet, use Telegram meanwhile.	Alerts arrive on the lock screen.
Email alerts	Partly	Email reaches only the account that runs the email service.	Every owner gets email once the business email domain is verified.
Forex	Paused	Hidden. The forex scans and alerts are off.	An admin can resume it at any time.

What you can do today

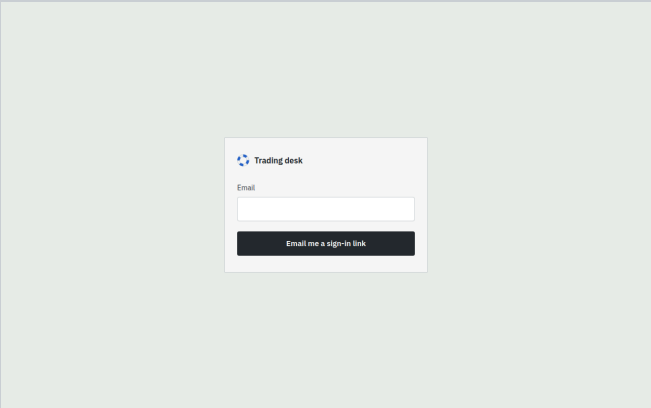

- Sign in, accept the notice, and look around every page.
- Install the portal on your phone (section 4).
- Read the watch list and any buys after each evening's screen (sections 7 to 9).
- Enter the stocks you actually bought so the portal watches their stops (section 10).
- Connect Telegram once it is set up (section 11).

3. Signing in

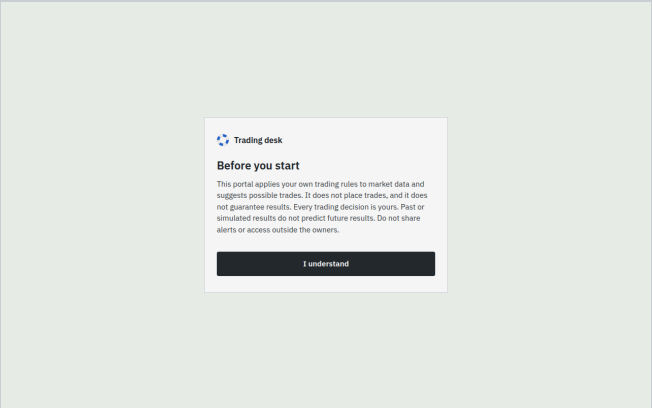

There are no passwords. You sign in with a one-time link. For now an admin creates the link and sends it to you.

1. An admin sends you a link by text or message. It works **once** and lasts **24 hours**.
2. Open the link. A page opens with a **Sign in** button; select it. (The button is there so that a message preview cannot use up your link before you tap it.)
3. The first time, read the notice and select **I understand**. You land on the Stocks page.

You stay signed in for 30 days on that device. To sign out, open **Settings** and select **Sign out**. To sign in on another device, or after 30 days, ask an admin for a new link.

The sign-in page. Requesting a link by email works once the business email is set up.

The one-time notice.

You see	What it means
That sign-in link has expired or was already used	Each link works once, for 24 hours. Ask an admin for a new one.
This email isn't approved	Only approved emails can sign in. Ask an admin to add yours in Settings, Users.

> Never forward a sign-in link. Anyone holding it can sign in as you until it is used or expires.

4. Install it on your phone

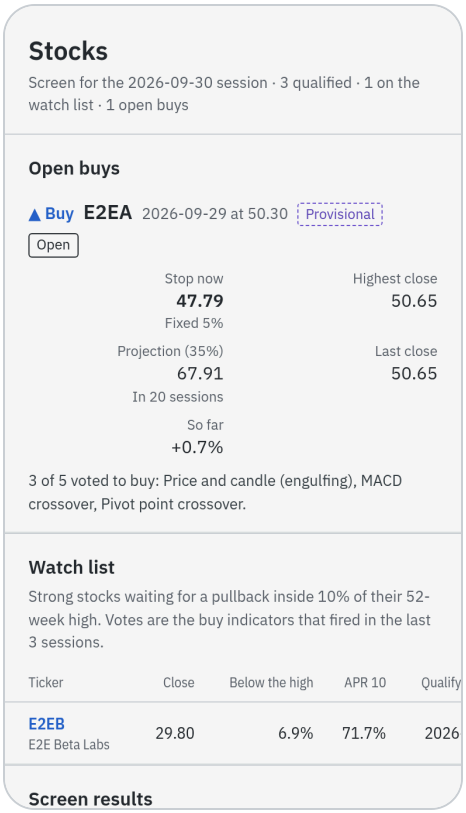

The portal works in any browser, but installing it on your Home Screen makes it open like an app. On iPhone, this step is required before phone notifications can be turned on.

iPhone and iPad

1. Open the portal in **Safari** (not Chrome) and sign in.
2. Tap the **Share** button.
3. Choose **Add to Home Screen**, then **Add**.
4. Open **Trading desk** from your Home Screen. The Home Screen copy has its own sign-in, so you may need a new link from an admin.

Android

1. Open the portal in **Chrome** and sign in.
2. Open the ⋮ menu.
3. Choose **Install app** or **Add to Home screen**.
4. Open **Trading desk** from your Home Screen.

The Stocks page on a phone, with the tab bar at the bottom.

5. Finding your way around

On a computer, the menu is on the left. On a phone, Stocks, Holdings and Settings are in the tab bar at the bottom.

Page	What it is for
Stocks	Open buys, the watch list, the day's screen results and closed buys. Select a ticker for its own page.
Holdings	The stocks you actually bought, with the stop that applies now. Private to you.
Health	Whether the scanner is running and when the last stock screen finished.
Settings	Profile, notifications, theme, sign out, and the admin pages.

How colours and labels work

- ▲ **Buy** is blue with an up arrow. The word is always shown, so colour is never the only clue.
- Provisional marks a rule whose exact definition the owners have not confirmed yet (for example the RSI sell level and the candle pattern list). A buy that relied on one shows the badge. Treat it with extra care.
- All times and dates are **New York time**. A **session** is one US trading day.
- The dot next to **Health** at the top of a page is green when all is well, amber when something needs a look, and red when the scanner has stopped.

6. How the stock system works

The system works like a funnel. A stock moves to the next stage only after passing the one before. Every number below is a setting an admin can change in Settings, Rules.

Stage	What has to be true
1. Qualified	The close is within **10 percent of the 52-week high**, and the stock moved at least **100 percent** over the year (the 52-week high is at least twice the 52-week low). The band from 90 percent of the high up to the high is the **pullback zone**.
2. 10-week momentum	Tested on the **week's close** (Friday, or Thursday when Friday is a market holiday). From that close, the portal looks back 1 to 10 weeks. For each week it works out the yearly pace of the gain since that week's close. The stock passes when at least **5 of the 10** weeks reach **455 percent**, the pace of a 35 percent gain in 20 sessions. That Friday is the stock's **qualifying date**.
3. Watch list	A stock that passes joins the watch list for **40 sessions** from its qualifying date. It stays watched even if it closes below the pullback zone. A new qualifying date restarts the 40 sessions.
4. Buy	While watched, the portal suggests a **buy** when at least **3 of 5 indicators** fired within the last **3 sessions** and the close is inside the pullback zone. The buy price is that session's close.
5. Hold	The portal shows a **projection** of 35 percent above the buy price within 20 sessions. It is a guide, not an exit: the trade rides on.
6. Sell	The first of: the **5 percent stop**, the **trailing stop** once the trade is up 10 percent, or a **sell signal** (3 of 5 indicators the other way). Section 9 explains each.

What 455 percent means in plain prices

To reach 455 percent, the week's close must be at least **8.75 percent** above the close 1 week back, **17.5 percent** above 2 weeks back, **35 percent** above 4 weeks back, and **87.5 percent** above 10 weeks back. Any 5 of the 10 weeks will do.

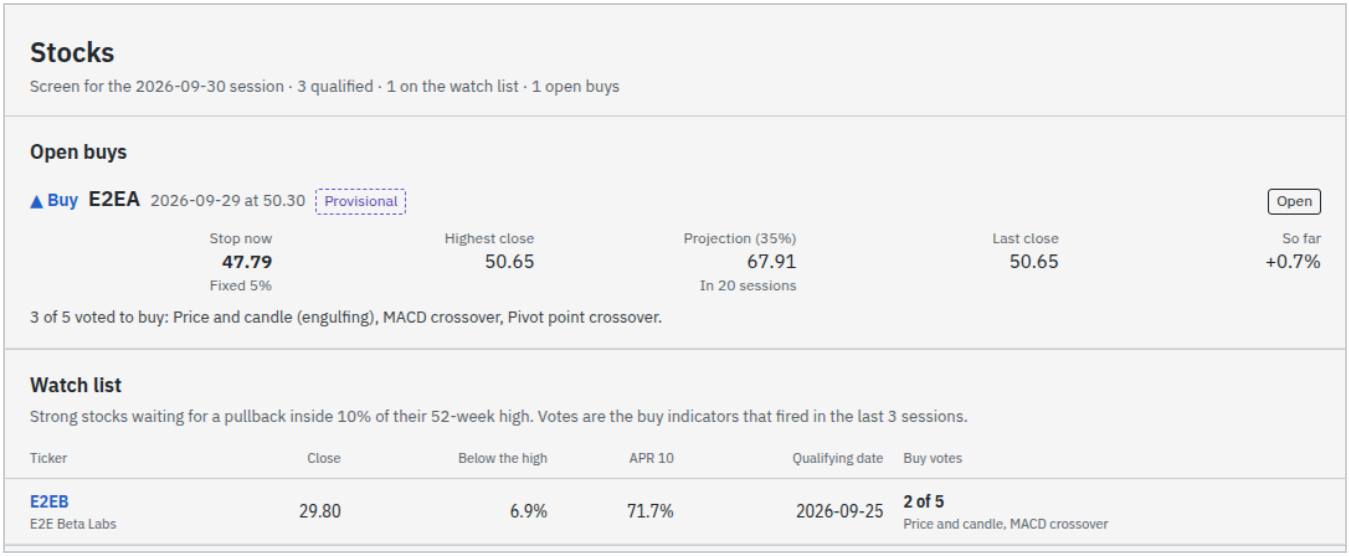

The five indicators

Indicator	Votes to buy when	Votes to sell when
Price and candle	A bullish candle pattern forms with the close inside the pullback zone	A bearish candle pattern forms
MACD crossover	The MACD line crosses above its signal line	It crosses below
Pivot point crossover	The daily pivot line, (high + low + close) / 3, hooks above its 3-day average	It hooks below
RSI	RSI crosses above 30	RSI crosses below 70 Provisional
Stochastics	Slow %K crosses above 20	Slow %K crosses below 80 Provisional

Each indicator counts once in the 3-session window, however often it fired. The system uses daily closes only, never prices during the day, and only finished trading days.

7. The Stocks page

Open **Stocks** after 6:30 pm New York time on a trading day to see that evening's results. The line under the title gives the session, and how many stocks qualified, are watched, and have open buys.

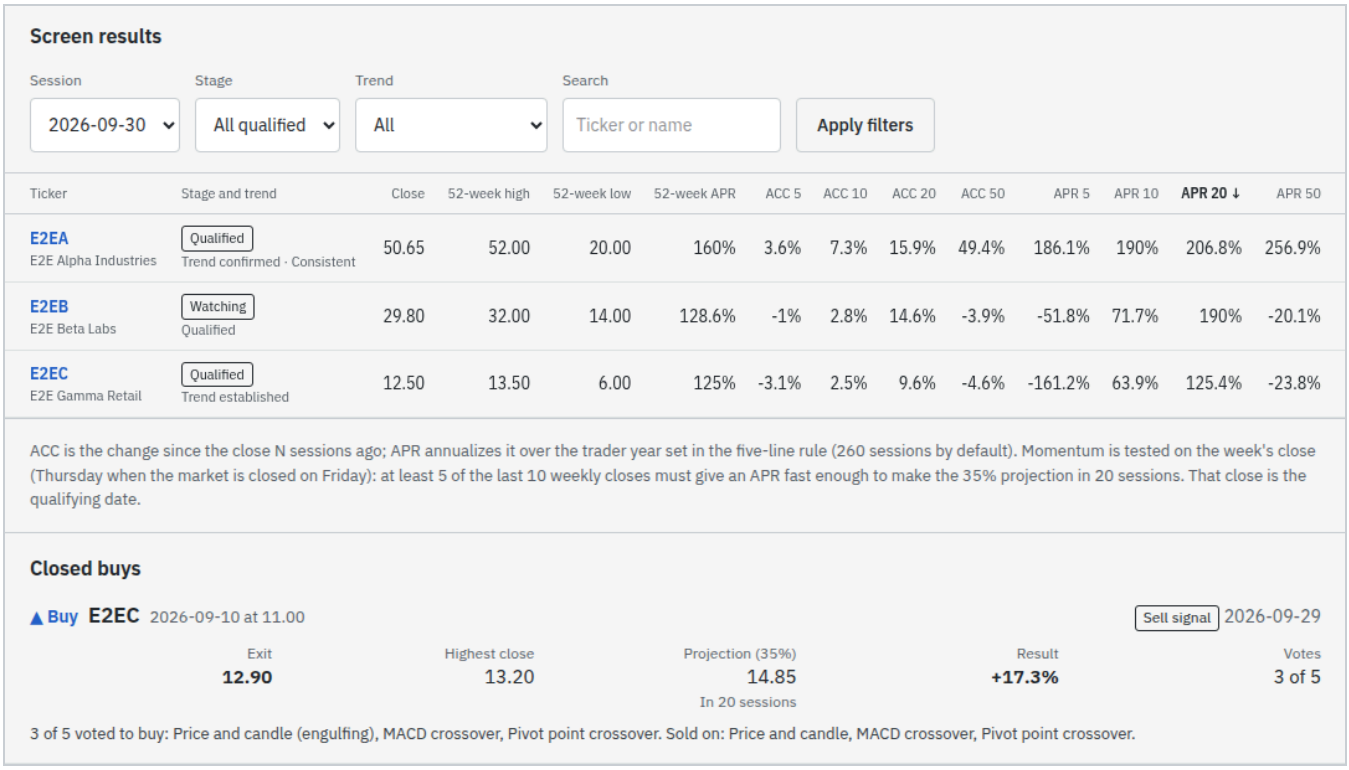

Open buys and the watch list (sample data).

Open buys

Each buy the system suggested that has not exited yet: the buy date and price, **Stop now** (the stop that applies today, with Fixed 5% or Trailing under it), the highest close since the buy, the projection, the last close, and the result so far. The last line names the indicators that voted to buy.

Watch list

Stocks that passed the 10-week test and are waiting for a buy. **Below the high** is how far the close is under the 52-week high; the buy needs it within 10%. **Buy votes** shows how many of the 5 indicators fired in the last 3 sessions, and which.

Screen results (sample data).

Screen results

Every stock that qualified that session. Use **Session** to look at an earlier day, **Stage** and **Trend** to filter, and **Search** for a ticker or company name, then select **Apply filters**. Select a column header to sort.

ACC and APR

ACC is the change since the close 5, 10, 20 or 50 sessions ago. APR is the same change at a yearly pace (260 trading days). They are background; the watch list uses the 10-week test.

Closed buys

At the bottom: past buys with how they ended (Stop, Trailing stop or Sell signal), the exit price and the result.

On many days nothing new joins the watch list and no buy fires. The rules are strict on purpose. An empty list is not a fault.

8. A stock's page

Select a ticker anywhere in the portal to see every check the system made on it, with the numbers.

Daily chart and five line chart
The last 60 sessions, and today's close against the closes 5, 10, 20 and 50 sessions ago.

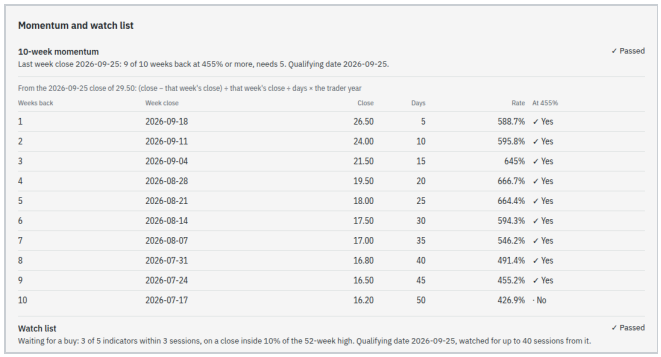

Qualification
Each stage 1 rule with its numbers, for example *Close 29.80, 52-week high 32.00, needs 28.80 or more*, and Passed or not.

Momentum and watch list
The 10-week test from the latest week's close, one row per week back, and whether the stock is watched.

Buys
Any buy on this stock, open or closed, with every event: bought, trailing stop started, projection reached, and the exit.

Stage history
When the stock qualified, joined the watch list, was bought and exited.

Add to holdings
If you bought the stock with your broker, record it here (section 10). The price and date are filled in for you; change them to what you actually paid.

Momentum and watch list

10-week momentum ✓ Passed
Last week close 2026-09-25: 9 of 10 weeks back at 455% or more, needs 5. Qualifying date 2026-09-25.

From the 2026-09-25 close of 29.50: (close − that week's close) ÷ that week's close × days × the trader year

Weeks back	Week close	Close	Days	Rate	At 455%
1	2026-09-18	26.50	5	588.7%	✓ Yes
2	2026-09-11	24.00	10	595.8%	✓ Yes
3	2026-09-04	21.50	15	645%	✓ Yes
4	2026-08-28	19.50	20	666.7%	✓ Yes
5	2026-08-21	18.00	25	664.4%	✓ Yes
6	2026-08-14	17.50	30	594.3%	✓ Yes
7	2026-08-07	17.00	35	546.2%	✓ Yes
8	2026-07-31	16.80	40	491.4%	✓ Yes
9	2026-07-24	16.50	45	455.2%	✓ Yes
10	2026-07-17	16.20	50	426.9%	· No

Watch list ✓ Passed
Waiting for a buy: 3 of 5 indicators within 3 sessions, on a close inside 10% of the 52-week high. Qualifying date 2026-09-25, watched for up to 40 sessions from it.

The 10-week test: 9 of 10 weeks at 455 percent or more, so it passed (sample data).

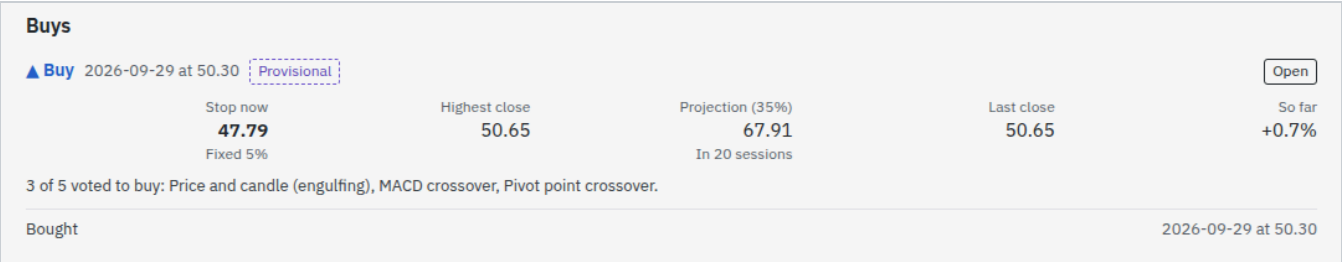

Indicators
After the 2026-09-30 session: 2 of 5 for a buy, 0 of 5 for a sell, each within the last 3 sessions. A buy or a sell needs 3.

Indicator	Buy	Sell	Values
Price and candle Bullish candle inside the pullback zone	Fired 2026-09-30	No	
MACD crossover MACD line crosses above its signal line	Fired 2026-09-30	No	
Pivot point crossover Pivot line hooks above its 3-day average	No	No	
RSI Provisional RSI crosses above the buy level	No	No	RSI 48.20
Stochastics Stochastics %K crosses above the buy level	No	No	

The five indicators after the latest session: 2 of 5 fired for a buy, so no buy yet (sample data).

9. Buys, stops and sells

After a buy, the system checks the trade after every close. These rules apply the same way to the system's buys and to your own holdings.

An open buy, 0.7 percent up, still on its fixed 5 percent stop (sample data).

Rule	What happens
Fixed stop	Until the trade is up 10 percent, a close at or below **5 percent under the buy price** ends it. Shown as *Stop*.
Trailing stop	Once a close reaches **10 percent above the buy price**, the stop moves to **5 percent under the highest close** since the buy and rises with it. It never falls. A close at or below it ends the trade. Shown as *Trailing stop*.
Sell signal	At least 3 of the 5 indicators fire to sell within 3 sessions. Shown as *Sell signal*.
Projection	35 percent above the buy price. When a close first reaches it you get an information alert, but the trade carries on.

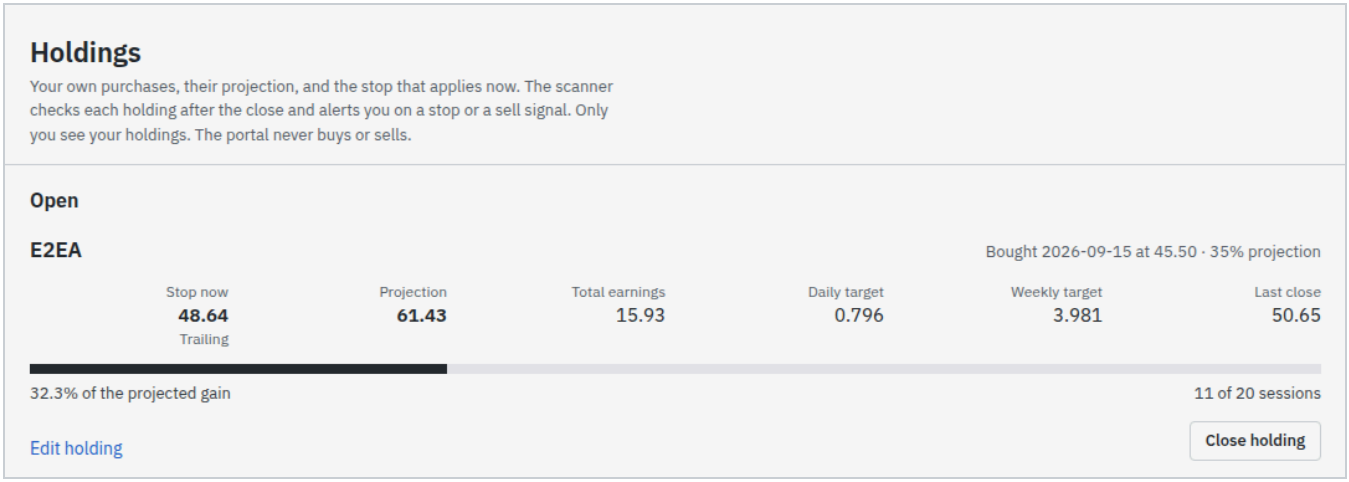

A worked example

1. Buy at **20.00**. The fixed stop is **19.00** (5 percent under).
2. A close of **22.00** is 10 percent up. The trailing stop starts at **20.90** (5 percent under 22.00).
3. The price climbs to a close of **26.00**. The trailing stop is now **24.70**.
4. A later close of **24.70** ends the trade with a trailing stop, **23.5 percent** up.

> **Prices are closes**
> All checks use the session's closing price, after the market closes. If you act on an alert, you buy or sell at or after the next open, so your price may differ from the one in the portal.

10. Holdings

Record the stocks you actually bought, and the portal watches them with the same stops and sell signals, using your own purchase price. Holdings are private: other owners cannot see yours.

One open holding on its trailing stop (sample data).

Add a holding

1. On a stock's page use **Add to holdings**, or open **Holdings** and fill in **Add a holding**.
2. Enter the **Ticker**, **Purchase price** and **Purchase date** from your broker.
3. Leave **Projection** (35%) and **Horizon** (20 sessions) as they are, or change them. Add **Notes** if useful.
4. Select **Add holding**.

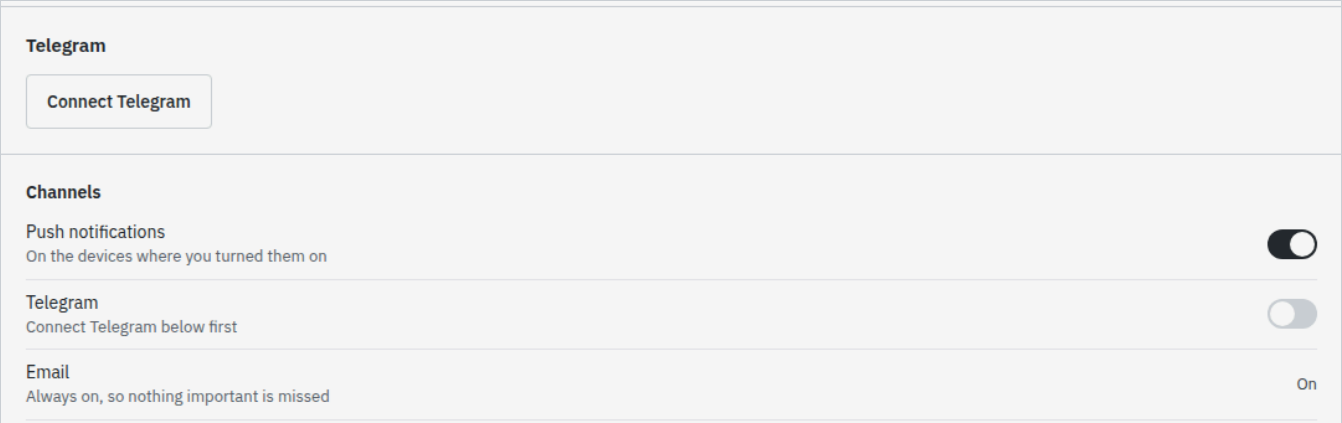

Reading a holding

- **Stop now** is the stop that applies after the last close, marked Fixed 5% or Trailing.
- **Projection**, **Total earnings**, **Daily target** and **Weekly target** come from your purchase price and projection.
- The bar shows how much of the projected gain you have reached, and how many of the horizon sessions have passed.
- When a stop or sell signal is hit, a note appears, for example *Sell: trailing stop on 2026-09-30 at 49.30. Close the holding here once you have sold.* You also get an alert if stock alerts are on.

Select **Edit holding** to fix a price or date. When you have sold with your broker, select **Close holding**.

11. Notifications

Open **Settings**, then **Notifications**. Choose where alerts go, which ones you want, and when to stay quiet.

Telegram and the channels.

Connect Telegram (recommended)

1. Install Telegram on your phone if you do not have it.
2. In the portal, select **Connect Telegram**. Telegram opens a chat with the Trading desk bot.
3. Tap **Start**. The bot replies *Connected. You will receive trade alerts here.*
4. That's it: Telegram alerts are now on. Select **Send test notification** to check.

To stop, select **Disconnect Telegram**. Telegram alerts turn off by themselves.

Other channels

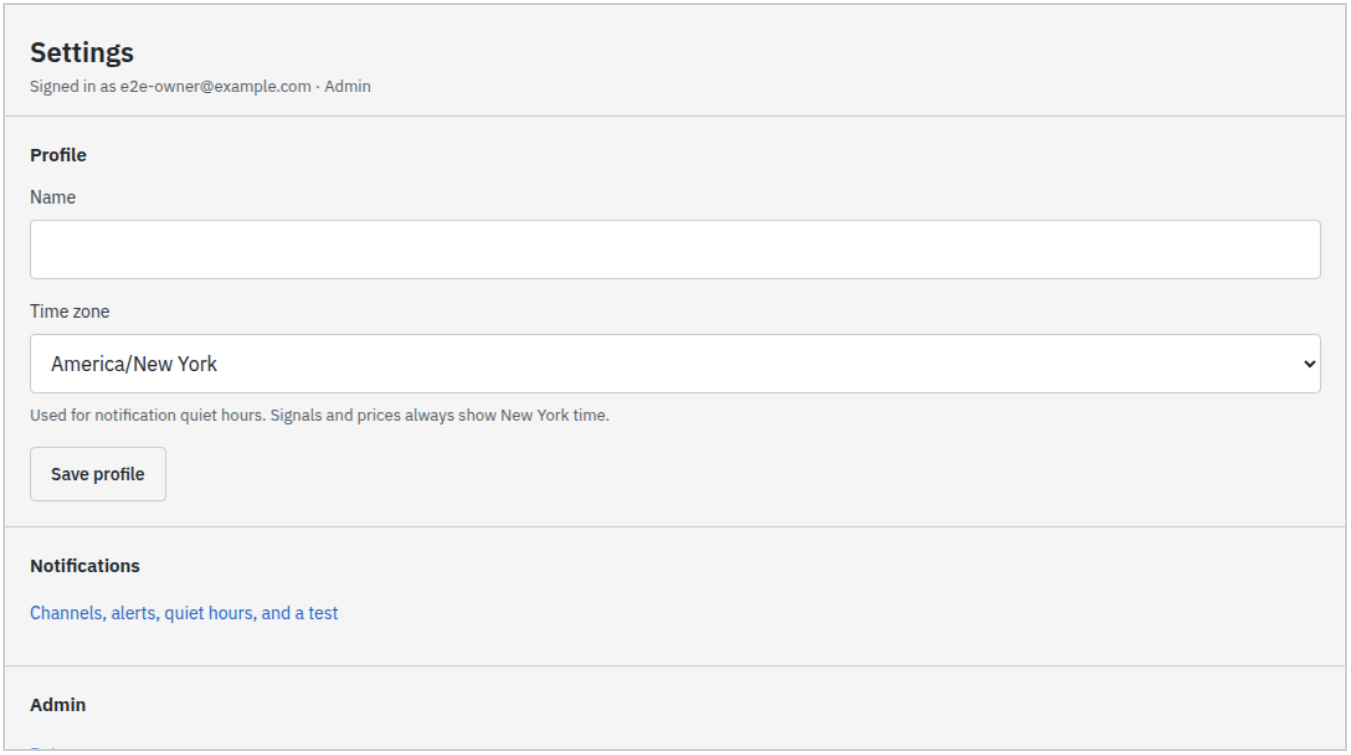

- **Push**: on each device, select **Turn on notifications** and allow them when asked. On iPhone, first install the portal (section 4). If the page says push isn't set up on the server yet, use Telegram.
- **Email**: always on, to your sign-in address. For now it only reaches some owners (section 2).

What you are sent

- **Stock digest and holdings**: each evening's new watch list stocks, every buy and how it exits, and the stops and sell signals on your own holdings.
- **Updates**: follow-ups on alerts you already received.
- **Quiet hours**: tick the box and set the hours in your own time zone. Alerts in quiet hours are not sent later. Everything still shows in the portal.

Select **Save notification settings** when done. **Recent deliveries** at the bottom lists what was sent to you, and the reason if something was skipped.

12. Your settings

Settings. An admin's view also lists the admin pages and the forex switch.

Profile
Your name and **time zone**, then **Save profile**. The time zone is used for your quiet hours; prices and dates always show New York time.

Notifications
Section 11.

Theme
Follow this device, Light or Dark, then **Save theme**.

Sign out
Ends your session on this device.

13. For admins

Admins see extra pages under Settings. Every admin change is recorded in an audit log.

Settings, Users (sample emails).

The Health page after a stock screen (sample data).

Let a new owner in

1. Open **Settings, Users**. Under **Approve an email**, enter the owner's email and select **Approve email**.
2. Once they appear in the list, select **Create sign-in link** on their row, then **Copy link**.
3. Send the link to them by text or message. It works once, for 24 hours. Create a new one whenever they need it.

Users

Change a role (owner or admin) with **Save role**, or **Deactivate** someone to remove access. The last admin cannot be demoted.

Rules

Every rule of the stock system with its settings and status. Select a rule to change a setting; **Save new version** keeps the old version on record, and the next evening's screen uses the new one. **Approve rule** turns a provisional rule into an approved one. Every buy records which rule versions produced it.

Forex

Forex is paused. **Resume forex** brings back the forex scans, alerts and pages as they were.

Health

The scanner's last report, the last stock screen and backfill, recent job runs and notification deliveries. If the scanner stops for more than 5 minutes, admins are alerted (by email, and on Telegram if connected), and again when it recovers.

14. Questions and fixes

My sign-in link says it has expired or was already used.
Each link works once and lasts 24 hours. Ask an admin for a new one. Open it on the device you want to use.

The Stocks page is empty, or shows yesterday.
The screen runs at 6:30 pm New York time on trading days, and may retry until 11 pm if prices are late. Check Health for the time of the last stock screen. There is no screen on weekends and market holidays.

The watch list is empty, or there are no buys.
Normal on many days. Few stocks pass the 10-week test, and a buy needs 3 of 5 indicators during a pullback.

A stock left the watch list.
Either its 40 sessions ran out, it was bought, or it closed below the pullback zone that day (it stays watched and shows again when it closes back inside the zone).

The buy price differs from what I paid.
The portal uses the session's close. Record your actual price in Holdings, and the stops follow your price.

I connected Telegram but get nothing.
Select **Send test notification**. If nothing arrives, check Recent deliveries for the reason, then disconnect and connect again.

My iPhone has no "Turn on notifications" button.
Install the portal from Safari to the Home Screen and open it from there (section 4).

What does "Provisional" mean?
The owners have not yet confirmed that rule's exact definition. Until they do, a buy that relied on it carries the badge.

15. Words used in the portal

Session
One US trading day. The portal works on each session's closing prices.

Qualified
Within 10 percent of the 52-week high, with at least a 100 percent move over the year.

Pullback zone
From 90 percent of the 52-week high up to the high. Buys happen here.

Week's close
The Friday close, or Thursday when Friday is a market holiday.

Qualifying date
The week's close on which a stock passed the 10-week test.

Watch list
Stocks waiting for a buy, for 40 sessions after their qualifying date.

APR
A change expressed at a yearly pace, using 260 trading days.

Indicator vote
One of the 5 indicators firing within the last 3 sessions.

Buy
At least 3 of 5 votes while watched, with the close in the pullback zone.

Projection
35 percent above the buy price within 20 sessions. A guide, not an exit.

Stop now
The stop that applies after the last close: fixed 5 percent, or trailing.

Trailing stop
5 percent under the highest close, once a trade is up 10 percent. It never falls.

Sell signal
At least 3 of 5 indicators firing to sell within 3 sessions.

Provisional
A rule the owners have not confirmed yet.

Trading desk suggests trades from your own rules. It does not place trades and does not guarantee results. Every decision is yours. Keep this guide, the portal and its alerts among the owners.
